

KEMA TYPE TEST CERTIFICATE OF SHORT-CIRCUIT PERFORMANCE

Object	A three-pole SF ₆ live-tank circuit-breaker, single-pole enclosure, common operated		2181-17
Type	LW30-145	Serial No.	17101 and 17102
Rated voltage	145 kV	Rated normal current	3150 A
Rated short-circuit current	40 kA	Rated frequency	50 Hz
Manufacturer	Shangdong Taikai High Voltage Switchgear Co., Ltd., Tai'an, China *)		
Client	Shangdong Taikai High Voltage Switchgear Co., Ltd., Tai'an, China		
Tested by	DNV GL Netherlands B.V., Arnhem, the Netherlands		
Date of tests	4, 5, 8, 12, 16, 18, 19 and 30 May and 9 June 2017		

The object, constructed in accordance with the description, drawings and photographs incorporated in this Certificate, has been subjected to the series of proving tests in accordance with

IEC 62271-100 (2012) subclauses 6.6 (STC), 6.102 to 6.106 (T10, T30, T60, T100), 6.108 (DEF), 6.109 (SLF) and 6.110 (Out-of-phase)

This Certificate has been issued by DNV GL following exclusively the STL Guides.

The results are shown in the record of proving tests and the oscillograms attached hereto. The values obtained and the general performance are considered to comply with the above standard and to justify the ratings assigned by the manufacturer as listed on page 7.

This Certificate applies only to the object tested. The responsibility for conformity of any object having the same type references as that tested rests with the Manufacturer.

*) as declared by the manufacturer

This Certificate consists of 389 pages in total.

DNV GL Netherlands B.V.

J.P. Fonteijne
Executive Vice President
KEMA Laboratories

Laboratories Arnhem, 5 December 2017

INFORMATION SHEET

1 KEMA Type Test Certificate

A KEMA Type Test Certificate contains a record of a series of (type) tests carried out in accordance with a recognized standard. The object tested has fulfilled the requirements of this standard and the relevant ratings assigned by the manufacturer are endorsed by DNV GL. In addition, the object's technical drawings have been verified and the condition of the object after the tests is assessed and recorded. The Certificate contains the essential drawings and a description of the object tested. A KEMA Type Test Certificate signifies that the object meets all the requirements of the named subclauses of the standard. It can be identified by gold-embossed lettering on the cover and a gold seal on its front sheet.

The Certificate is applicable to the object tested only. DNV GL is responsible for the validity and the contents of the Certificate. The responsibility for conformity of any object having the same type references as the one tested rests with the manufacturer.

Detailed rules on types of certification are given in DNV GL's Certification procedure applicable to KEMA Laboratories.

2 KEMA Report of Performance

A KEMA Report of Performance is issued when an object has successfully completed and passed a subset (but not all) of test programmes in accordance with a recognized standard. In addition, the object's technical drawings have been verified and the condition of the object after the tests is assessed and recorded. The report is applicable to the object tested only. A KEMA Report of Performance signifies that the object meets the requirements of the named subclauses of the standard. It can be identified by silver-embossed lettering on the cover and a silver seal on its front sheet.

The sentence on the front sheet of a KEMA Report of Performance will state that the tests have been carried out in accordance with The object has complied with the relevant requirements.

3 KEMA Test Report

A KEMA Test Report is issued in all other cases. Reasons for issuing a KEMA Test Report could be:

- Tests were performed according to the client's instructions.
- Tests were performed only partially according to the standard.
- No technical drawings were submitted for verification and/or no assessment of the condition of the object after the tests was performed.
- The object failed one or more of the performed tests.

The KEMA Test Report can be identified by the grey-embossed lettering on the cover and grey seal on its front sheet.

In case the number of tests, the test procedure and the test parameters are based on a recognized standard and related to the ratings assigned by the manufacturer, the following sentence will appear on the front sheet. The tests have been carried out in accordance with the client's instructions. Test procedure and test parameters were based on If the object does not pass the tests such behaviour will be mentioned on the front sheet. Verification of the drawings (if submitted) and assessment of the condition after the tests is only done on client's request.

When the tests, test procedure and/or test parameters are not in accordance with a recognized standard, the front sheet will state the tests have been carried out in accordance with client's instructions.

4 Official and uncontrolled test documents

The official test documents of DNV GL are issued in bound form. Uncontrolled copies may be provided as a digital file for convenience of reproduction by the client. The copyright has to be respected at all times.

5 Accreditation of KEMA Laboratories

The KEMA Laboratories of DNV GL are accredited in accordance with ISO/IEC 17025 by the respective national accreditation bodies. KEMA Laboratories Arnhem, the Netherlands, is accredited by RvA under nos. L020, L218, K006 and K009. KEMA Laboratories Chalfont, United States, is accredited by A2LA under no. 0553.01. KEMA Laboratories Prague, the Czech Republic, is accredited by CAI as testing laboratory no. 1035.

1 IDENTIFICATION OF THE OBJECT TESTED

1.1 Ratings/characteristics of the object tested

Voltage	145 kV	X
Lightning impulse withstand voltage	650 kV	
Power-frequency withstand voltage	315 kV	
Normal current	3150 A	
Number of poles	3	
Frequency	50 Hz	X
Short-circuit making current / peak withstand current	100 kA _{peak}	X
Short-circuit breaking current / short-time withstand current	40 kA	X
• d.c. time constant	45 ms	X
• minimum opening time	26,6 ms	
• d.c. component	44 %	X
Duration of short-circuit	3 s	X
Transient recovery voltage		
• first-pole-to-clear factor	1,5	X
Operating sequence	O-0,3 s-CO-3 min-CO	X
Short-line fault surge impedance	450 Ω	X
Out-of-phase making and breaking current	10 kA	X
• out-of-phase voltage factor	2,5	X
Line-charging breaking current	50 A	
Cable-charging breaking current	160 A	
Supply voltage of closing and opening devices and auxiliary circuits		
• closing device	220 Vd.c.	
• opening device	220 Vd.c.	
• motor	220 Va.c.	
Filling pressure for interruption SF ₆ at 20 °C	0,70 MPa	
Class	E1	X
Class	C2, M2	

X = This rating has been proved by the tests of this Certificate.

1.2 Description of the object tested

A three-pole SF₆ live-tank circuit-breaker, single-pole enclosure, common operated

Minimum functional pressure for interruption SF₆ at 20 °C 0,60 MPa

Mechanism:

Stored energy closing (springs, charged by motor).

Stored energy opening (springs, charged at closing).

1.3 Travel recorder

Travel recorder attached to main contact shaft. Non-linear with contact travel.

1.4 List of drawings

The manufacturer has guaranteed that the object submitted for tests has been manufactured in accordance with the following drawings and/or documents. KEMA Laboratories has verified that these drawings and/or documents adequately represent the object tested. The manufacturer is responsible for the correctness of these drawings and/or documents and the technical data presented.

The following drawings and/or documents have been included in this Certificate:

Drawing no./document no.	Revision
T40290366	1

The following drawings and/or documents are only listed for reference and are kept in KEMA Laboratories' files:

2 GENERAL INFORMATION

2.1 The tests were witnessed by

Name	Company
Chong, W.	Shangdong Taikai High Voltage Switchgear Co., Ltd.,
Peiqing, L.	Tai'an, China
Zhi Yuan, Z.	
Kejia, X.	
Li Wen, Z.	
Zhonghua, L.	

2.2 The tests were carried out by

Name	Company
Dekker, M. (12, 30 May 2017)	DNV GL Netherlands B.V.,
Minkhorst, D. (18, 19 May 2017)	Arnhem, the Netherlands
Nijman, R.M. (16, 18 May 2017)	
Aditya, J. (4, 5, 8 May and 9 June 2017)	

2.3 Accuracy of measurement

The guaranteed uncertainty for the measured voltages and currents taking into account the total measuring system, is less than 5%, unless mentioned otherwise.

3 LEGEND

Phase indications

If more than one phase is recorded on oscillogram, the phases are indicated by the digits 1, 2 and 3. These phases 1, 2 and 3 correspond to the phase values in the columns of the accompanying table, respectively from left to right.

Explanation of the letter symbols and abbreviations on the oscillograms

pu	Per unit (the reference length of one unit is represented by the black bar on the oscillogram)
CS1	Timing signal contact separation
CS2	Timing signal contact separation
CS3	Timing signal contact separation
I1cs	Current of current circuit, synthetic tests
I1TO	Current through test object
I1TOa	Current through test object
I2cs	Current of current circuit, synthetic tests
I2TO	Current through test object
I2TOa	Current through test object
I3cs	Current of current circuit, synthetic tests
I3TO	Current through test object
I3TOa	Current through test object
IABcl	Current closing coil auxiliary breaker
IABop	Current opening coil auxiliary breaker
Ics	Current of current circuit, synthetic tests
Ireig	Current reignition circuit, synthetic tests
Isyn	Current synthetic circuit
Isyn1	Current synthetic circuit
Isyn2	Current synthetic circuit
Itank	Tank current test object
ITO	Current through test object
ITO/A	Current through test object, amplified
ITOcl	Current closing coil test object
ITOop	Current opening coil test object
TR	Travel recorder
U1cs	Voltage current circuit
U1S	Supply voltage
U1TO	Voltage across test object
U2cs	Voltage current circuit
U2S	Supply voltage (2nd transformer winding, one phase test)
U2TO	Voltage across test object
U3cs	Voltage current circuit
U3TO	Voltage across test object
Ucs	Voltage current circuit
UTO	Voltage across test object
UTO/A	Voltage across test object, amplified

4 REPEATED TEST DUTIES

During the complete test series forming this Certificate the following initial test-duties have been repeated because of errors in assembly or maintenance. According to subclause 4.9 of the general STL-Guide, written, convincing and detailed explanations have been given by the manufacturer for the root cause of the failures. The received explanations are kept in KEMA Laboratories archive.

Repeated test-duties
T100s (a) and T100s(b)

7.1 Condition before test

Breaker (Serial No 17101) in same condition.

Pole A under test.

Supply to fixed contact.

Moving contact earthed.

Frame earthed via a CT.

Auxiliary breaker:

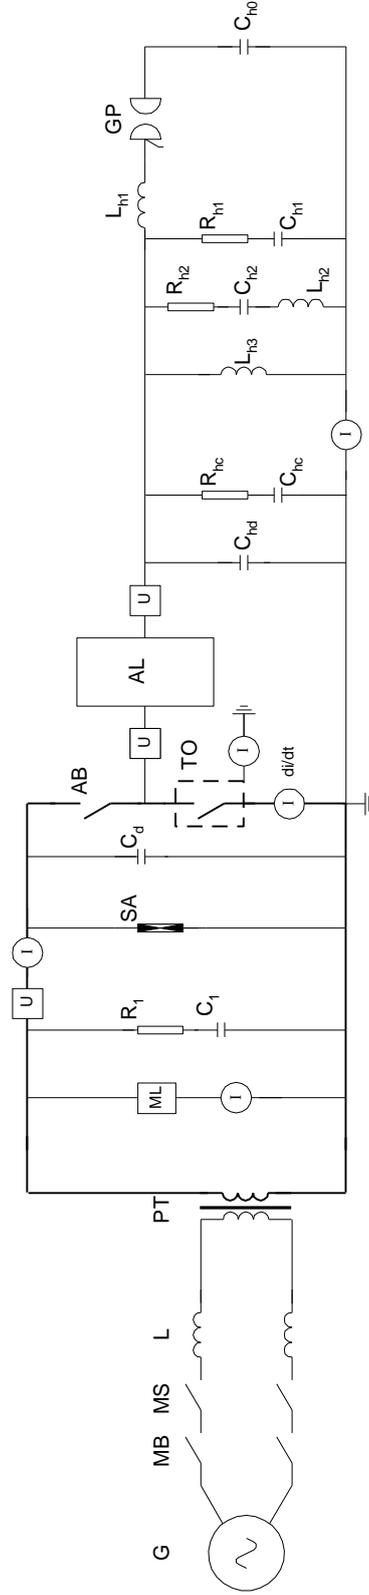

An SF₆ breaker, provided by KEMA Laboratories.

Number of elements: 1 per breaker.

7.2 Test circuit S05

8 VOLTAGE TESTS AS A CONDITION CHECK

Standard and date

Standard	IEC 62271-100
Test date	5 May 2017

8.1 Condition before test

Breaker (Serial No 17101) in same condition.

Pole A under test.

Enclosure earthed via a CT.

Tests 170505-5003 to 5016:

Voltage applied to moving contact of pole A.

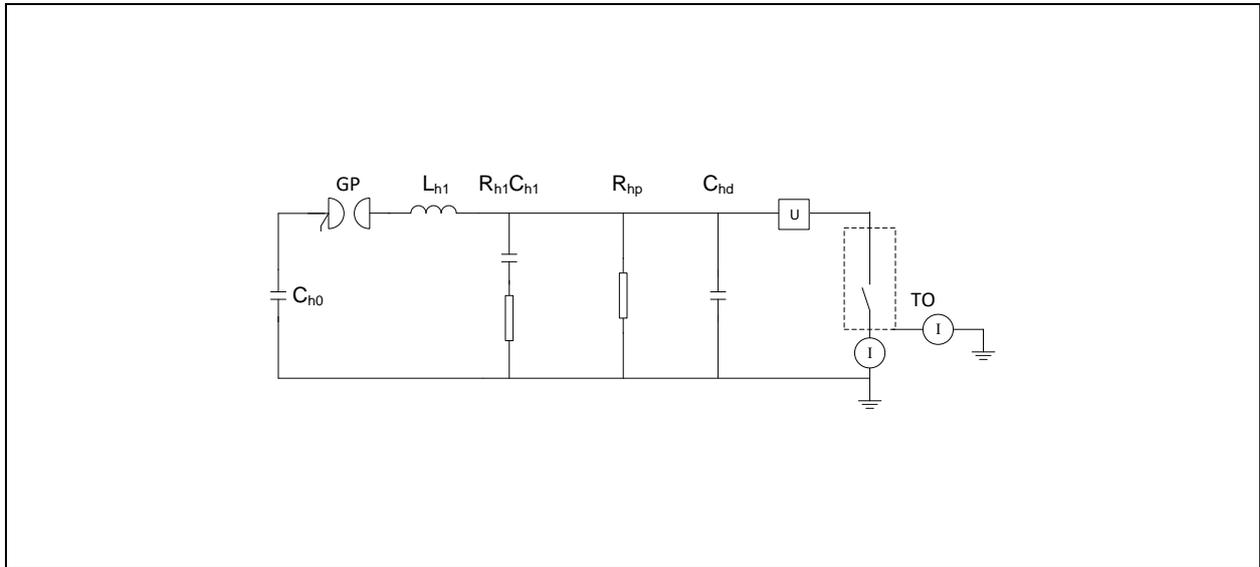

Fixed contact earthed via a CT.

Tests 170505-5017 to 5027:

Voltage applied to fixed contact of pole A.

Moving contact earthed via a CT.

8.2 Test circuit S06

GP = Gap U = Voltage Measurement to earth
 L = Reactor I = Current Measurement
 R = Resistor TO = Test Object
 C = Capacitor GP = Gap

Test number: 170505-5027

Phase		A
Charging voltage capacitor bank	kVd.c.	251
Peak voltage, test object	kV	390

Gas pressure at 20 °C 0,60 MPa

Remarks: Breaker withstood the test voltage.

8.4 Condition / inspection after test

Externally no visible change.

Inspection of contacts:

Fixed arcing contact moderately burnt.

Moving arcing contact moderately burnt.

Fixed main contact finger tips showed locally moderate commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally moderate commutation marks. Silver layer on main contact area intact.

Nozzle moderately eroded.

Auxiliary nozzle moderately eroded.

14 T100a

Standard and date

Standard	IEC 62271-100
Test date	12 May 2017

14.1 Condition before test

Breaker (Serial No 17101) in same condition.
Supply to moving contacts.
Short-circuit on fixed contacts.
Frame earthed via a CT.

Auxiliary breaker:

An SF₆ breaker, provided by KEMA Laboratories.
Number of elements: 1 per breaker.

Parameters of the last major loop based on table15 for a minimum clearing time of 47,7 ms:

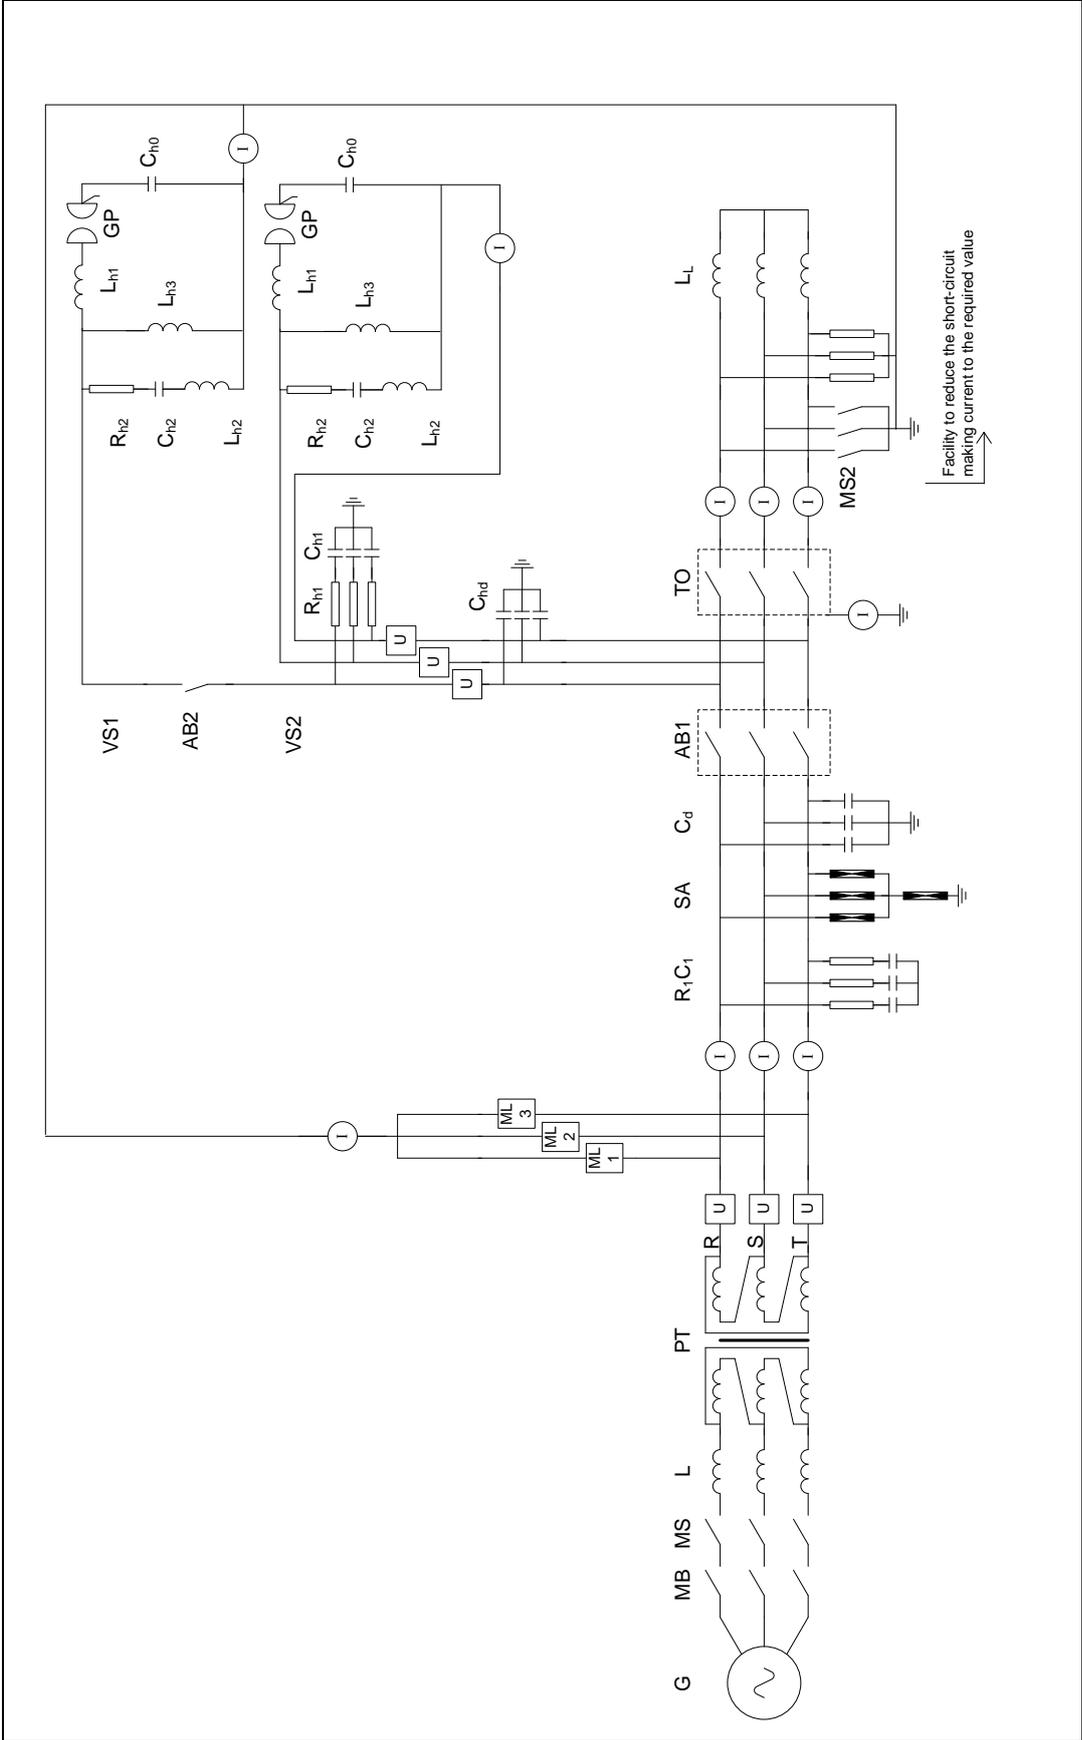

Duration of last loop: 11,5 ms.

Current peak of last loop: 1,21 p.u.

DC component at the instant of contact separation during the test deviates from the rated DC component of the test breaker, due to the difference between the rated time constant of the rated short-circuit current of the breaker and the time constant of the current of the test plant.

t _d	μs	< 2,0	< 2,0	< 2,0
t ₁	μs	67	55	55
t ₂	μs	266	219	219
RRRV	kV/ μs	2,00	1,40	1,40

The circuit is composed of:

a) **A three-phase current source**

The neutral point of the supply circuit is isolated and the short-circuit-point is earthed.

b) **Two parallel current injection circuits**

One of the two circuits is used for the test of the first-pole-to-clear conditions. This circuit, one side of which is earthed and based on a fptc-factor of 1,5, is applied to the terminals of the first clearing pole, phase R.

The second circuit is used to obtain the conditions of the second and third clearing poles. This circuit, which is floating in relation to earth, is applied across these two poles, phase S and phase T. The voltage is divided at 50% / 50% between the two poles by means of capacitors

The recovery voltage for both circuits is transformed in a decaying power-frequency voltage by the use of air-cored reactors.

c) **Multi-loop reignition circuits**

For all poles standard RC-reignition circuits have been used.

The phases R, S and T relate to the diagram, presented on the previous page.

t _h	μs	367	438	434

Voltage opening coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: Breaker cleared.
O_s = Operation in a synthetic circuit.

15 NO-LOAD TESTS

Standard and date

Standard	IEC 62271-100
Test date	12 May 2017

15.1 Condition before test

Breaker (Serial No 17101) in same condition.

15.2 Test results and oscillograms

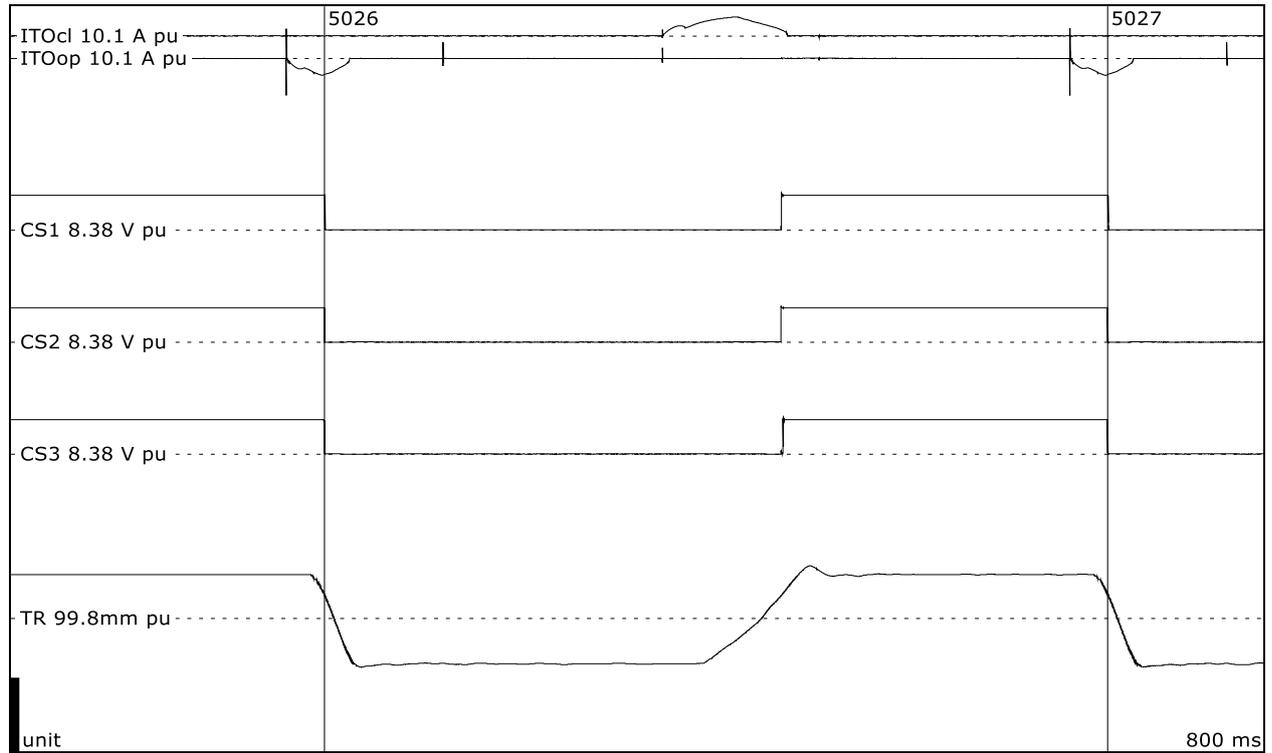

Overview of test numbers

170512-5026 to 5031

Remarks

-

No-load test

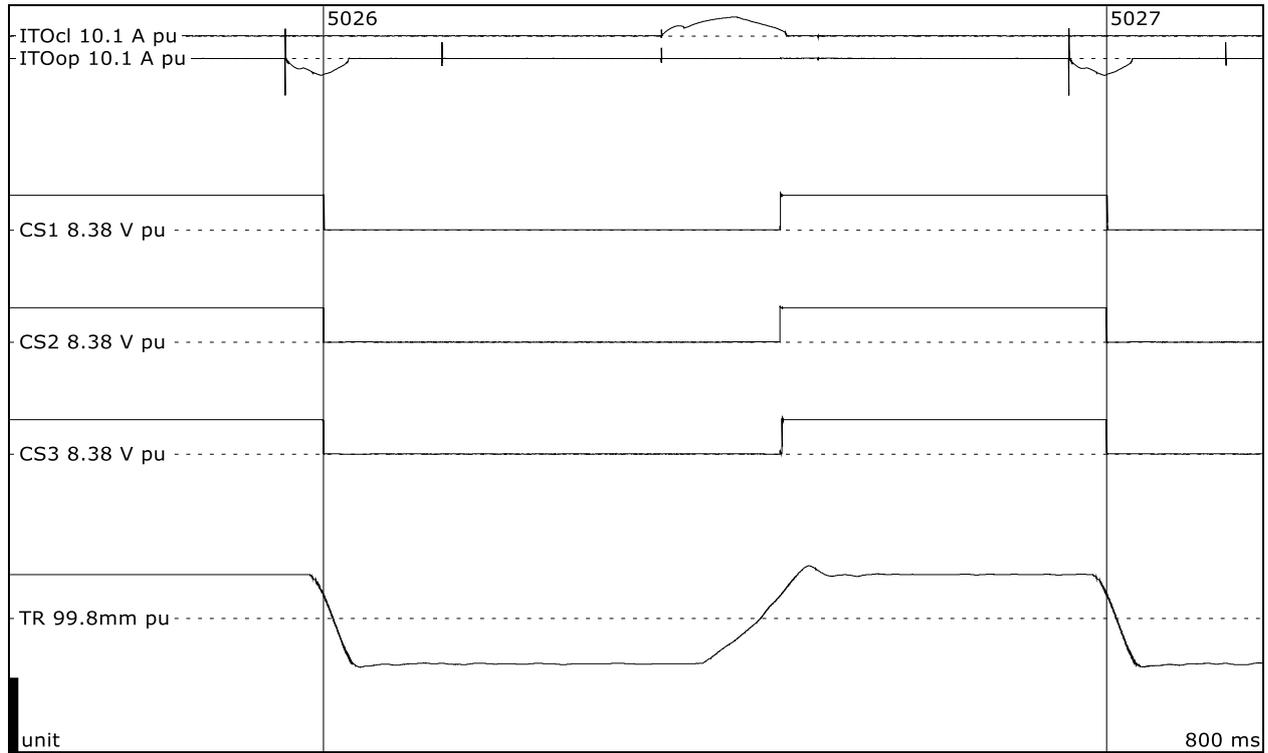

Test number: 170512-5026

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,30		
Opening time	ms	24,8	24,4	24,5

Voltage opening coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

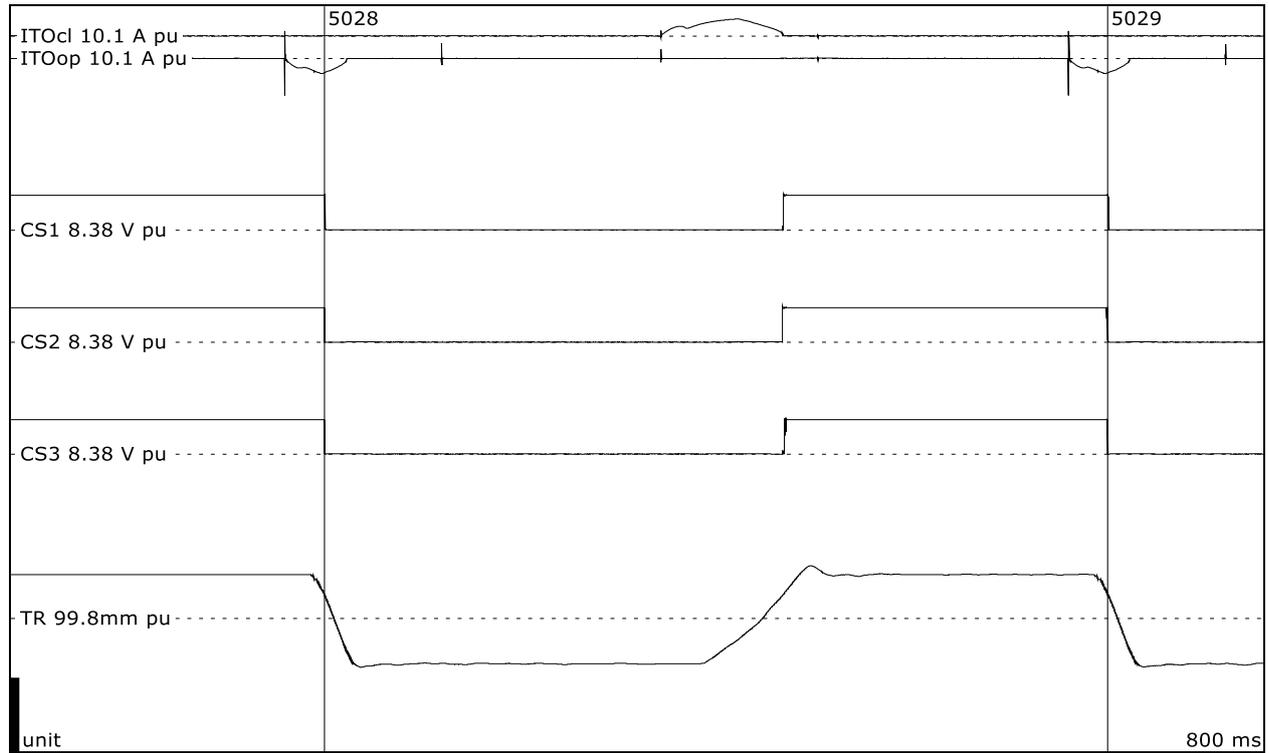

Test number: 170512-5027

Time interval between operations	s	0,292		
Operation	CO			
Phase		A	B	C
Current closing coil	A	2,56		
Closing time	ms	75,9	75,5	76,7
Current opening coil	A	-2,30		
Opening time	ms	24,6	24,2	24,3

Voltage closing coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	242 Vd.c.	Operating pressure	- MPa

Remarks: -

No-load test

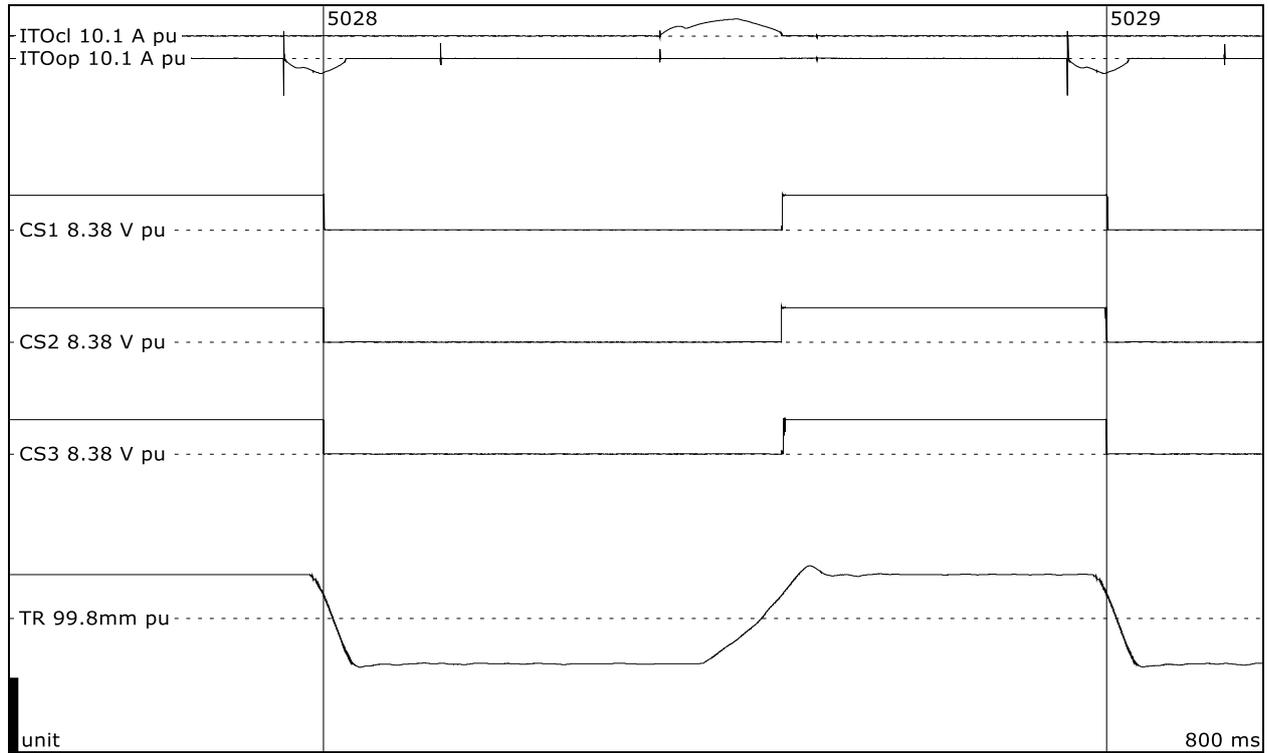

Test number: 170512-5028

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,07		
Opening time	ms	25,6	25,3	25,3

Voltage opening coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

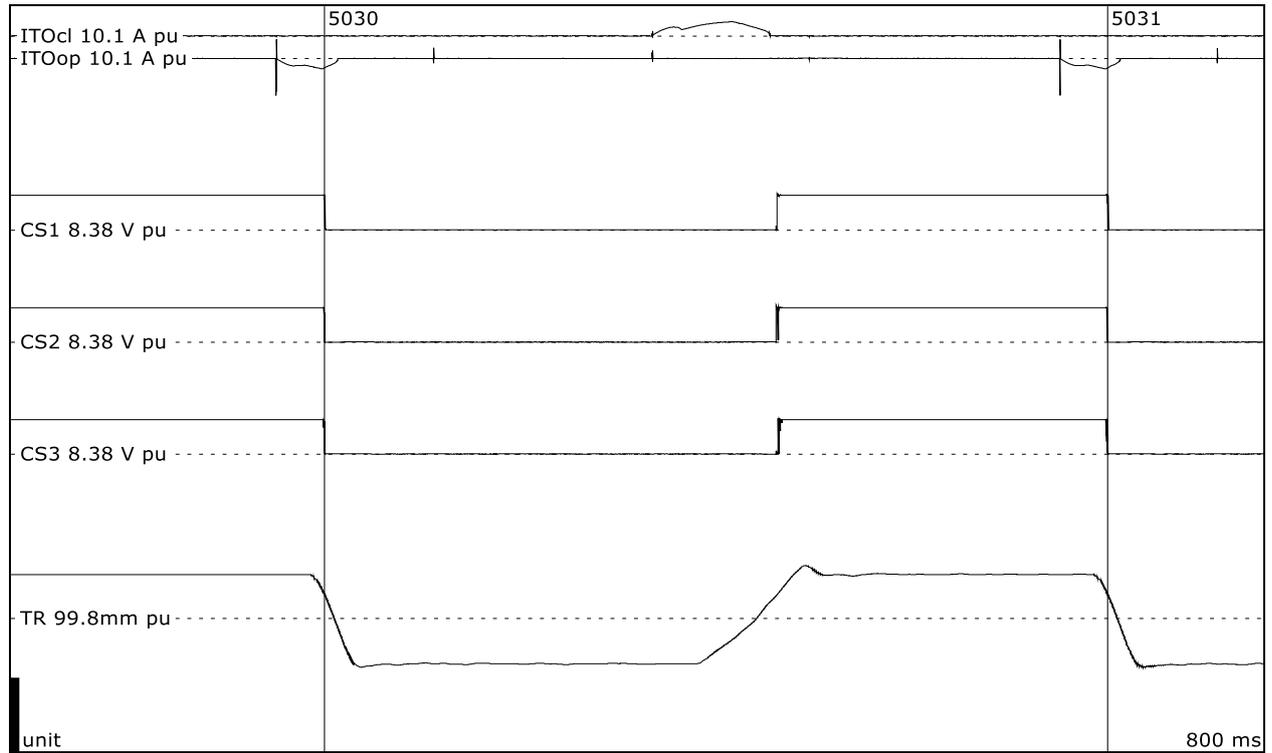

Test number: 170512-5029

Time interval between operations	s	0,293		
Operation	CO			
Phase		A	B	C
Current closing coil	A	2,29		
Closing time	ms	77,9	77,2	78,6
Current opening coil	A	-2,07		
Opening time	ms	25,5	25,1	24,9

Voltage closing coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	220 Vd.c.	Operating pressure	- MPa

Remarks: -

No-load test

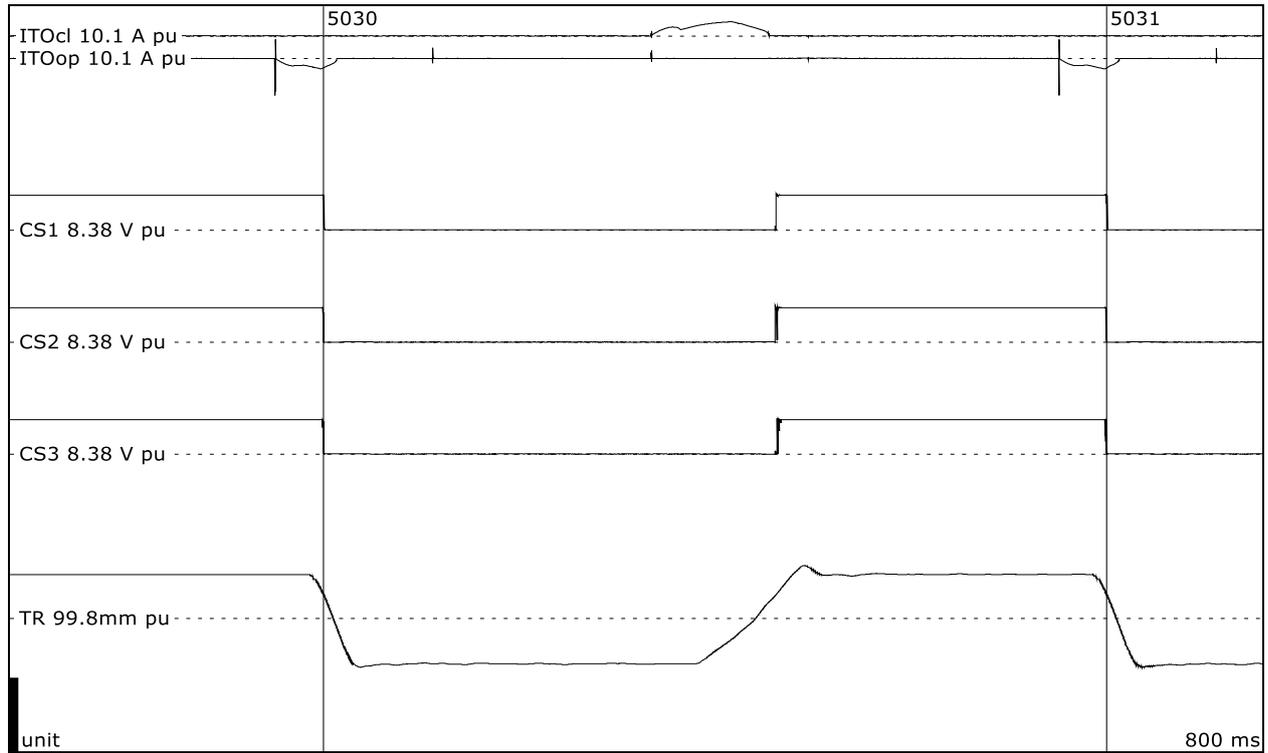

Test number: 170512-5030

Operation		O		
Phase		A	B	C
Current opening coil	A	-1,42		
Opening time	ms	31,3	30,7	30,8

Voltage opening coil	154 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

Test number: 170512-5031

Time interval between operations	s	0,289		
Operation	CO			
Phase		A	B	C
Current closing coil	A	1,91		
Closing time	ms	79,3	78,8	79,9
Current opening coil	A	-1.42		
Opening time	ms	30,8	30,3	29,7

Voltage closing coil	187 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	154 Vd.c.	Operating pressure	- MPa

Remarks: -

15.3 Condition / inspection after test

Externally no visible change.

Inspection of contacts:

Fixed arcing contact moderately burnt.

Moving arcing contact moderately burnt.

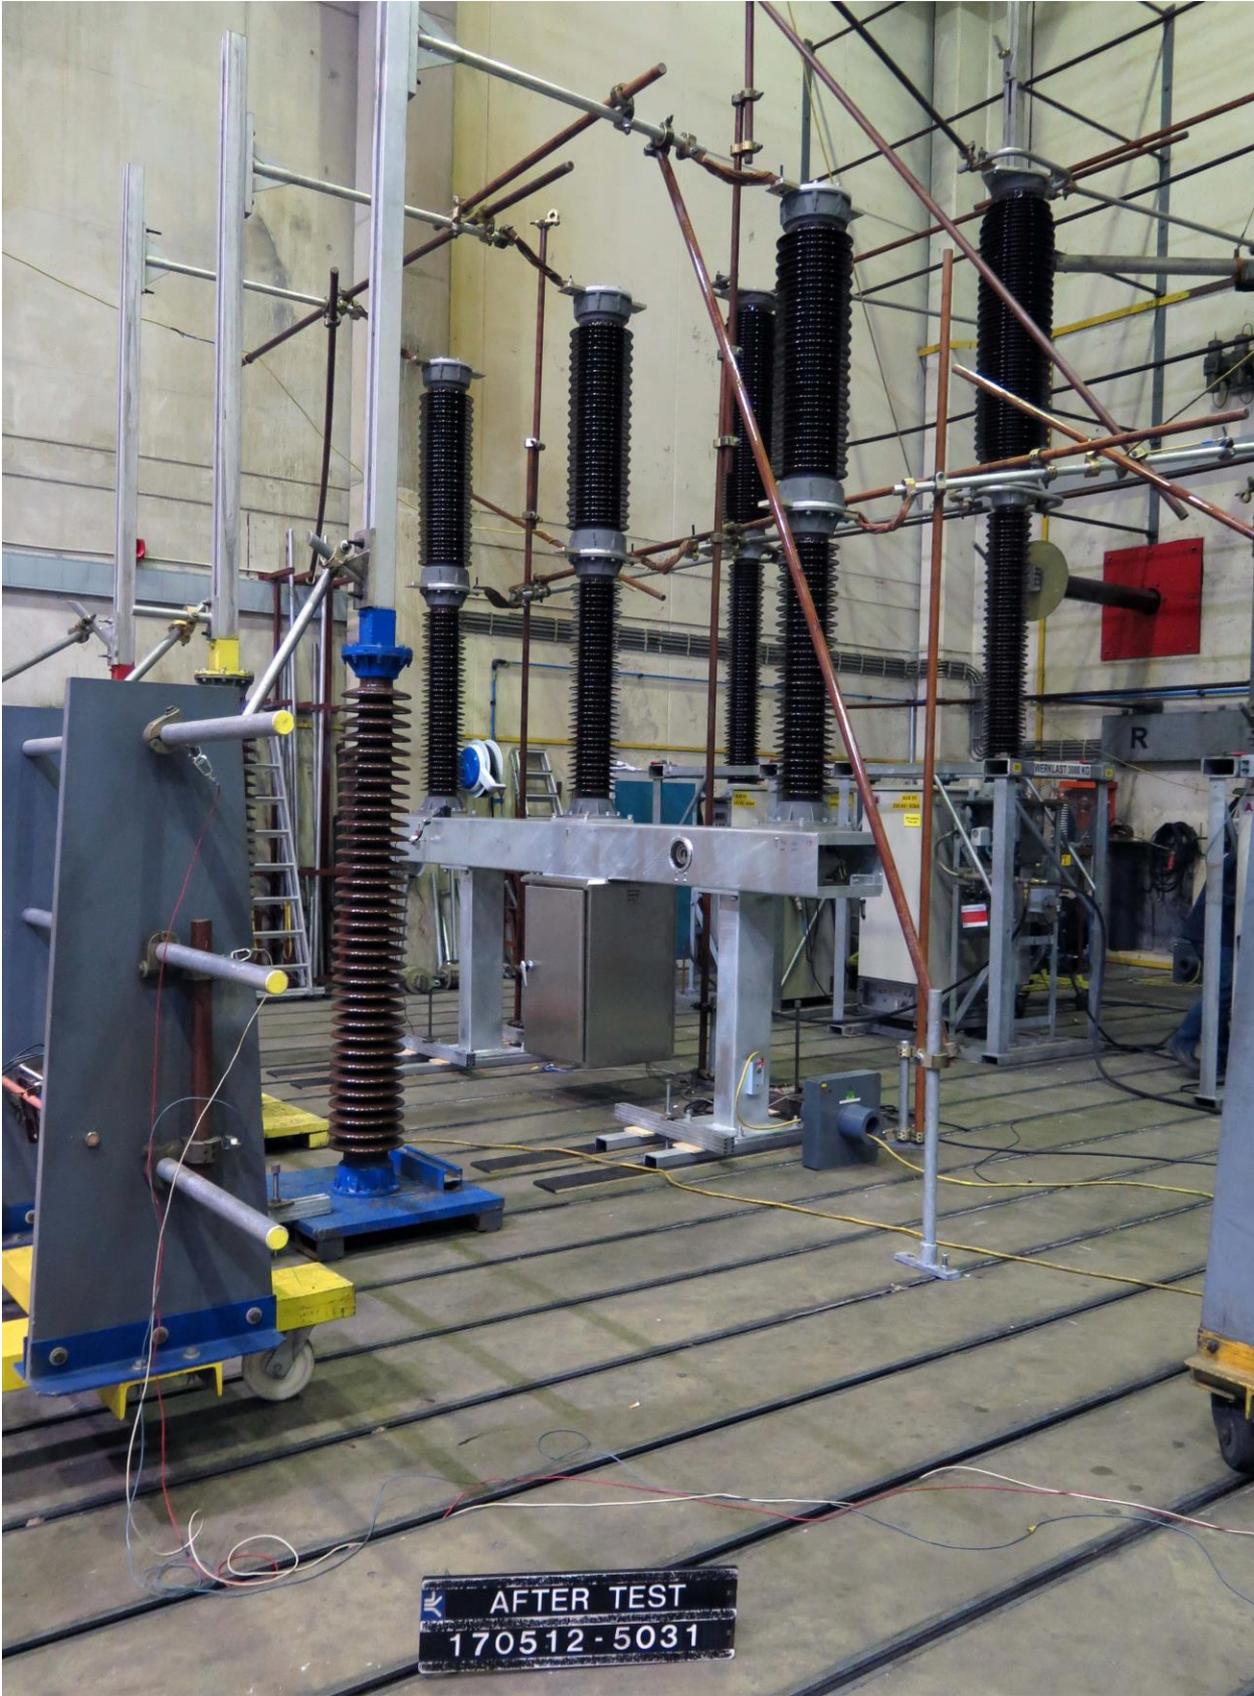

Fixed main contact finger tips showed locally moderate commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally moderate commutation marks. Silver layer on main contact area intact.

Nozzle moderately eroded.

Auxiliary nozzle moderately eroded.

15.4 Photographs after test

16 NO-LOAD TESTS

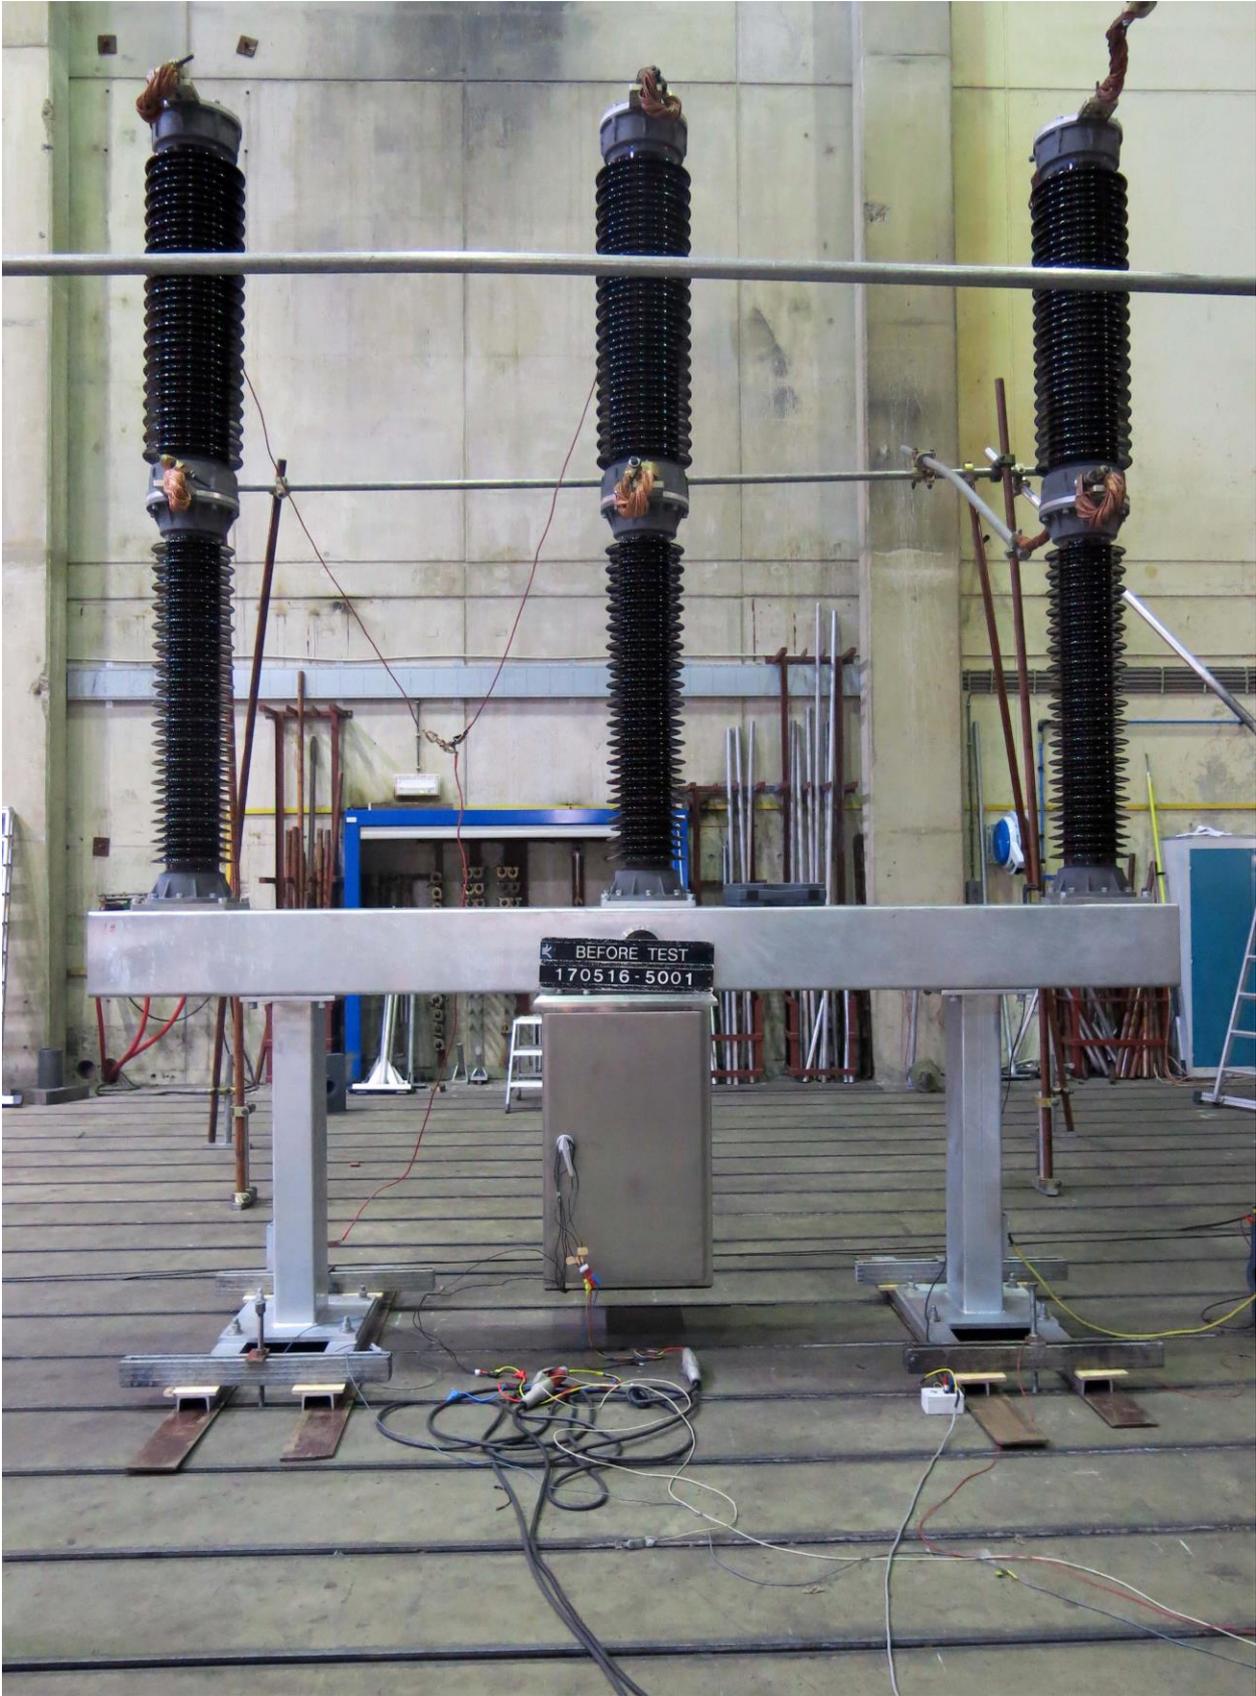

Standard and date

Standard	IEC 62271-100
Test date	16 May 2017

16.1 Condition before test

Breaker (Serial No 17101) reconditioned.

16.2 Photograph before test

16.3 Test results and oscillograms

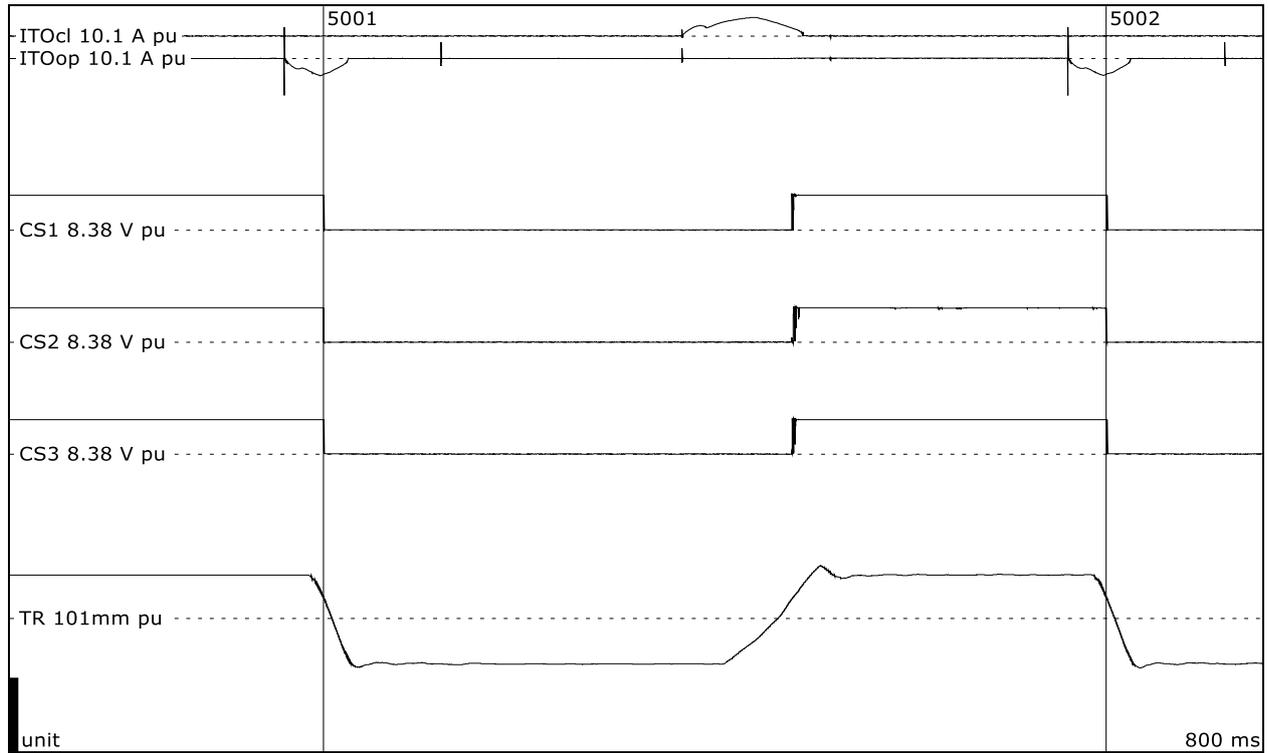

Overview of test numbers

170516-5001 to 5006

Remarks

-

No-load test

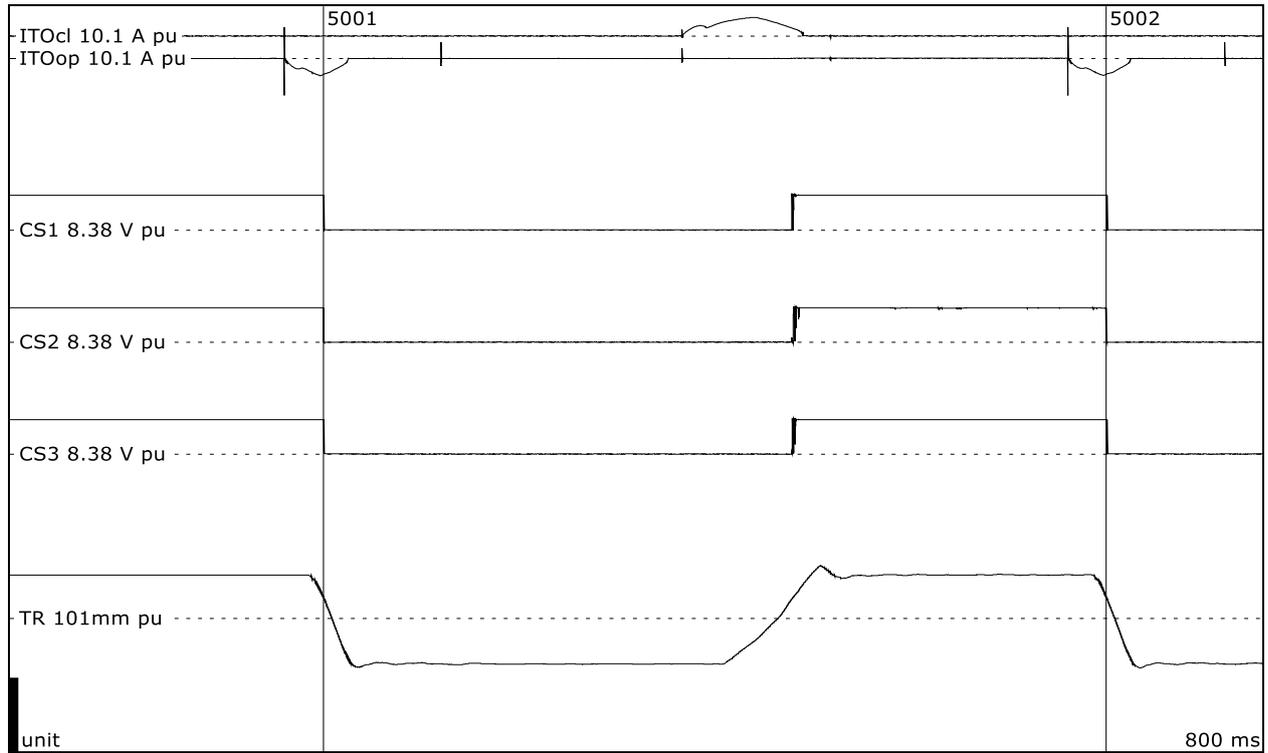

Test number: 170516-5001

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,34		
Opening time	ms	25,5	25,1	25,6

Voltage opening coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

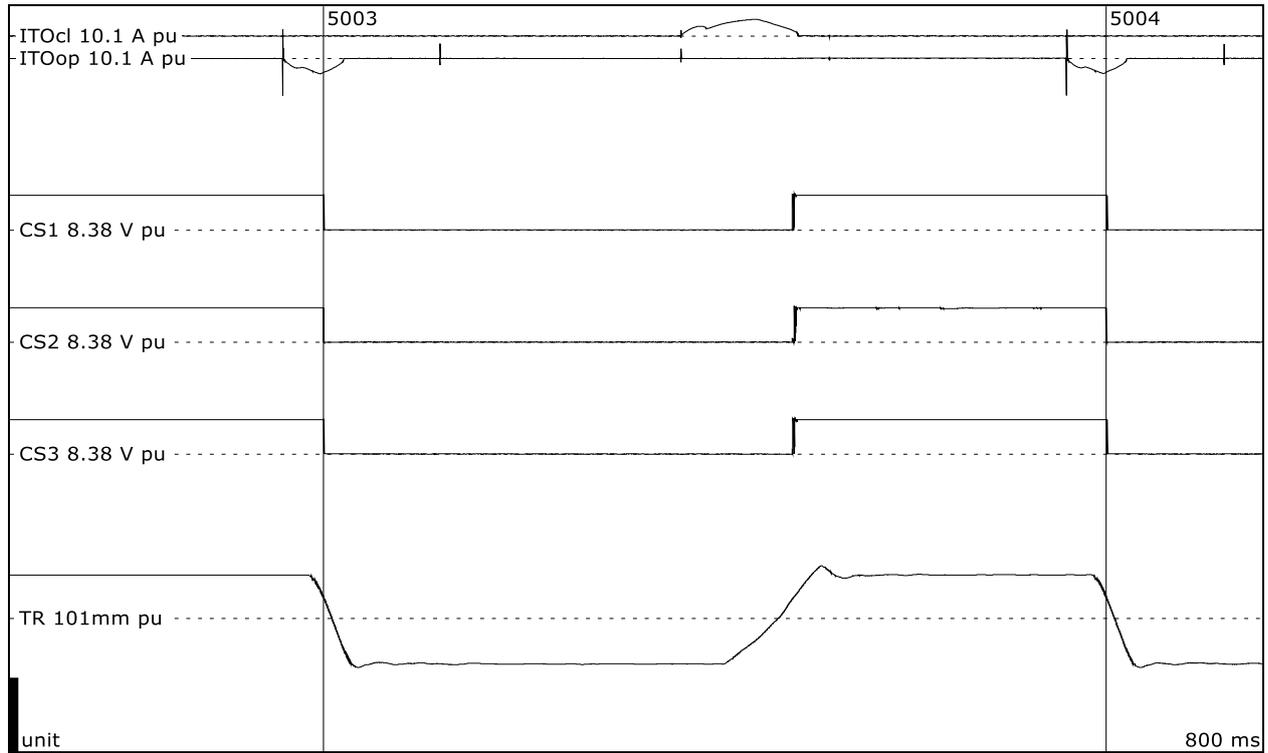

Test number: 170516-5002

Time interval between operations	s	0,299		
Operation	CO			
Phase		A	B	C

Phase		A	B	C
Current closing coil	A	1,87		
Closing time	ms	73,5	74,7	72,1
Current opening coil	A	-5,00		
Opening time	ms	31,0	30,6	30,7

Voltage closing coil	187 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	154 Vd.c.	Operating pressure	- MPa

Remarks: -

20.3 Condition / inspection after test

Externally no visible change.

Inspection of contacts:

Pole A (T10)

Fixed arcing contact very slightly burnt.

Moving arcing contact very slightly burnt.

Fixed main contact finger tips showed locally very slight commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally very slight commutation marks. Silver layer on main contact area intact.

Nozzle very slightly eroded.

Auxiliary nozzle very slightly eroded.

Pole B (T30)

Fixed arcing contact slightly burnt.

Moving arcing contact slightly burnt.

Fixed main contact finger tips showed locally slight commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally slight commutation marks. Silver layer on main contact area intact.

Nozzle slightly eroded.

Auxiliary nozzle slightly eroded.

Pole C (DEF)

Fixed arcing contact slightly burnt.

Moving arcing contact slightly burnt.

Fixed main contact finger tips showed locally slight commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally slight commutation marks. Silver layer on main contact area intact.

Nozzle slightly eroded.

Auxiliary nozzle slightly eroded.

21 NO-LOAD TESTS

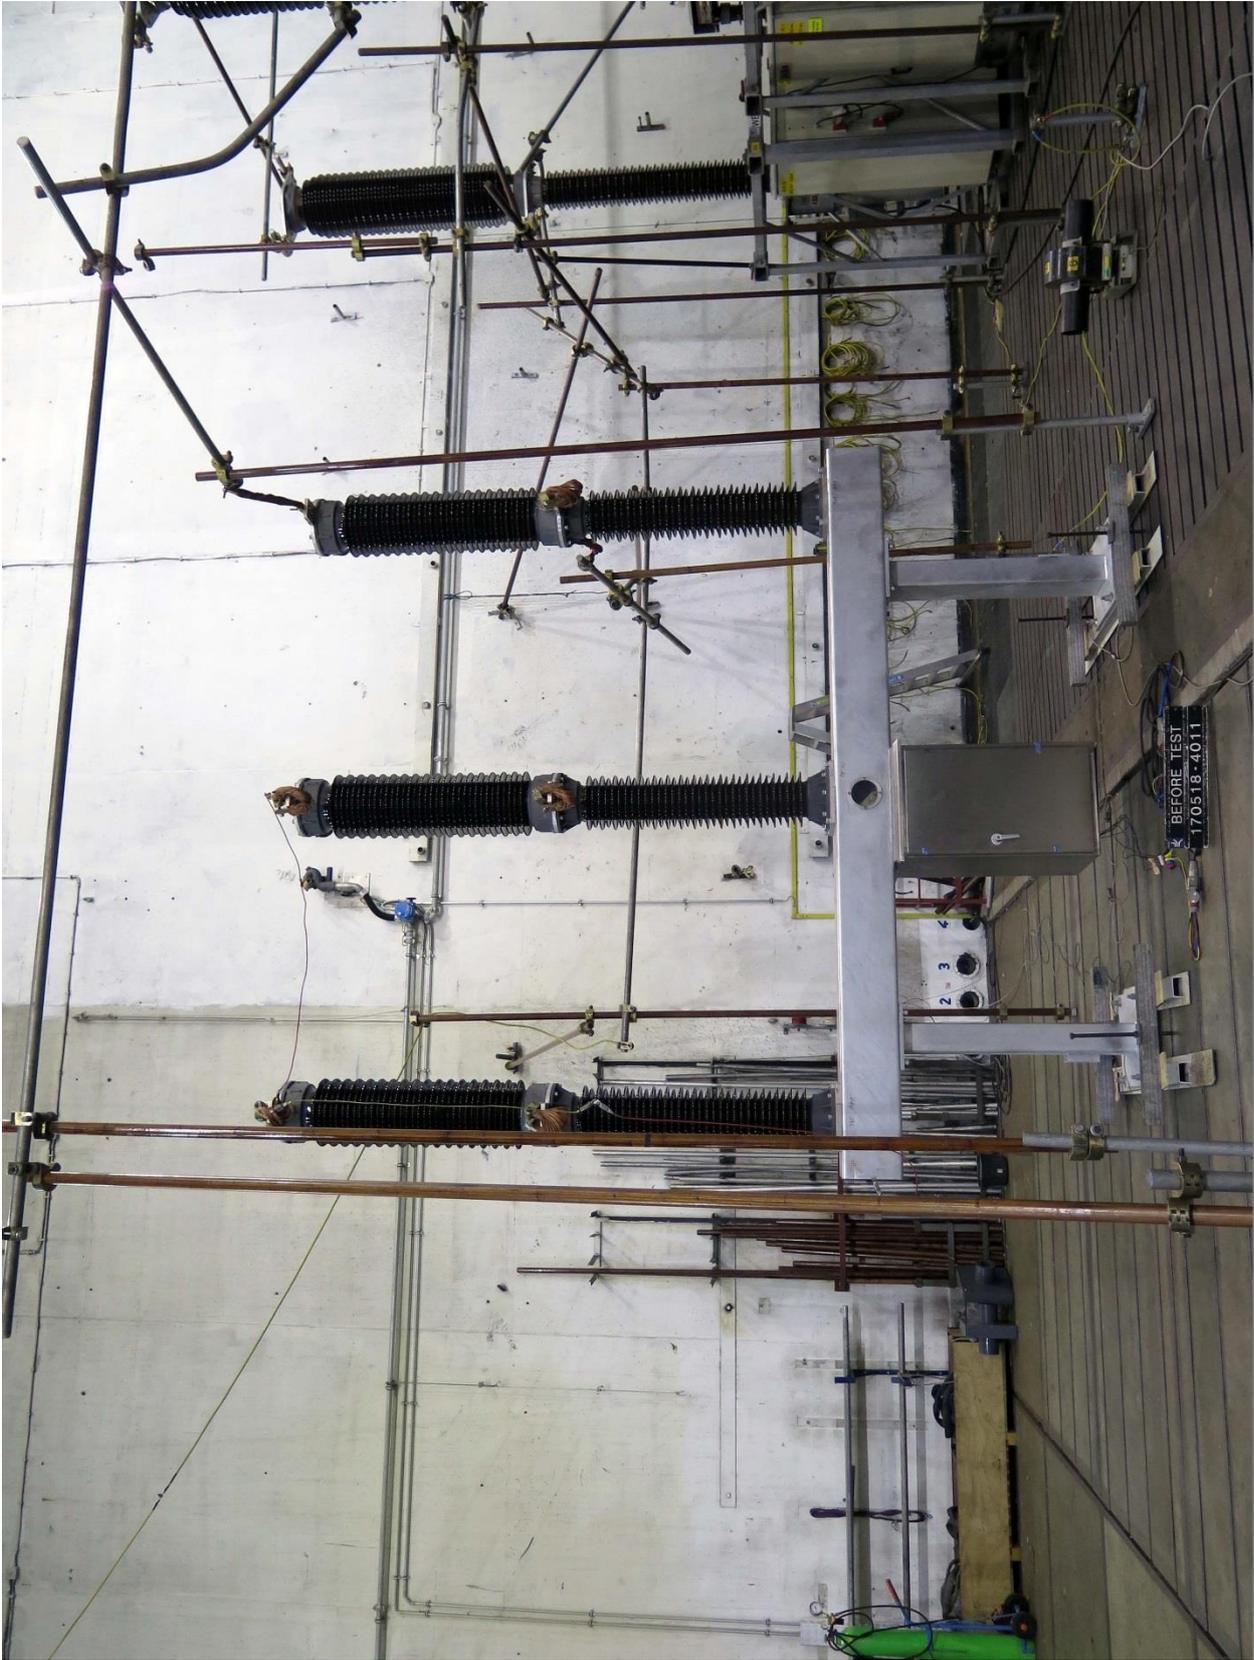

Standard and date

Standard	IEC 62271-100
Test date	18 May 2017

21.1 Condition before test

Breaker (Serial No 17102) reconditioned.

21.2 Photograph before test

21.3 Test results and oscillograms

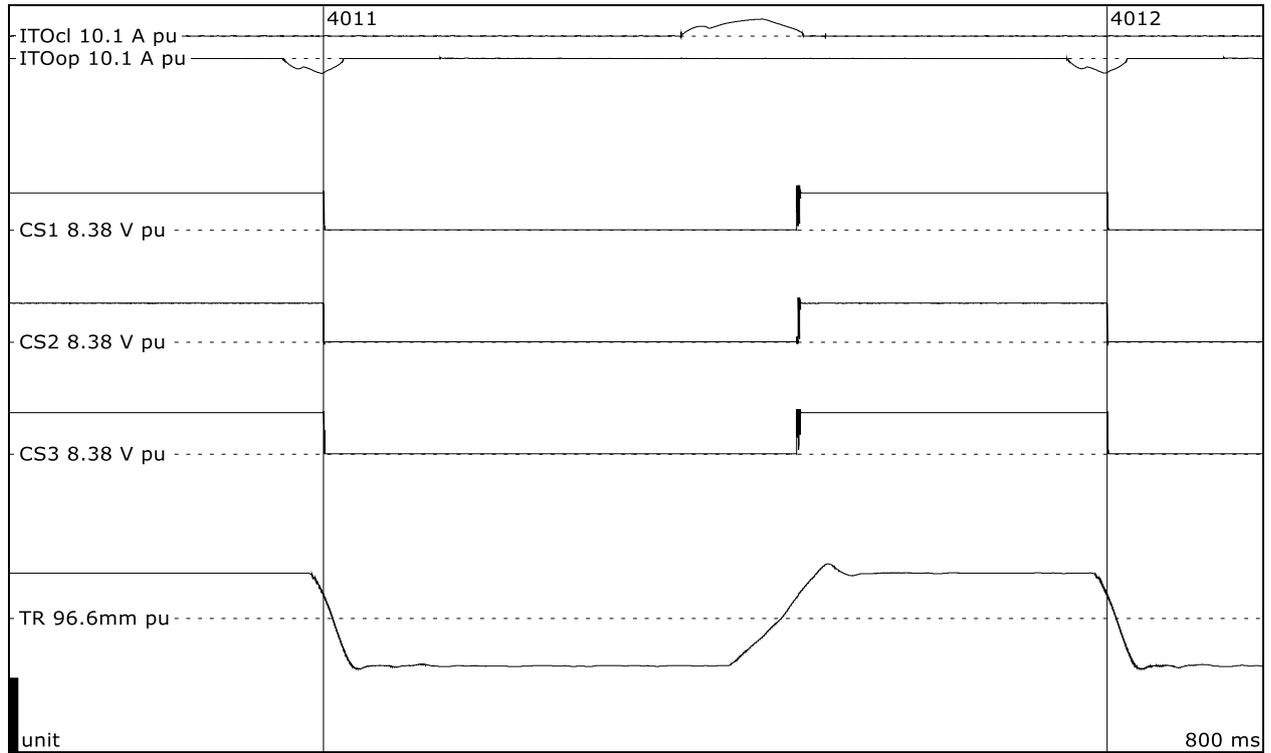

Overview of test numbers

170518-4011 to 4016

Remarks

-

No-load test

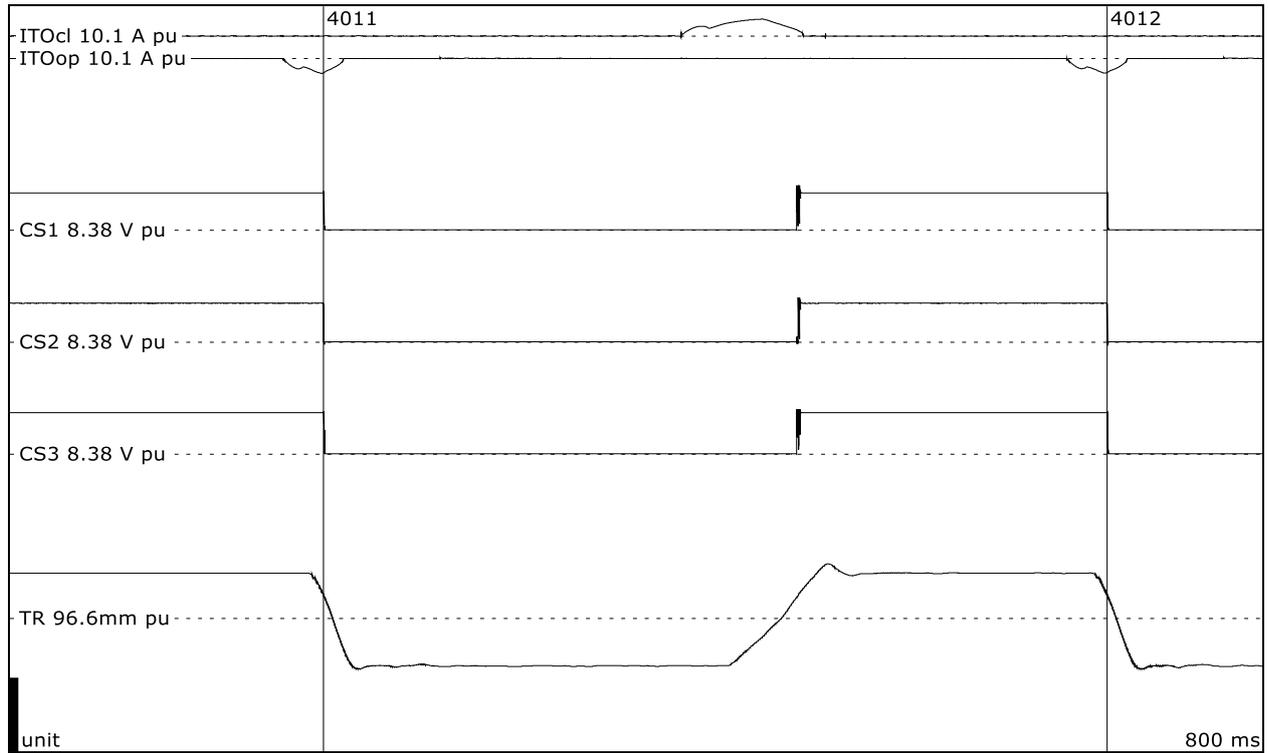

Test number: 170518-4011

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,03		
Opening time	ms	26,4	25,9	26,5

Voltage opening coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

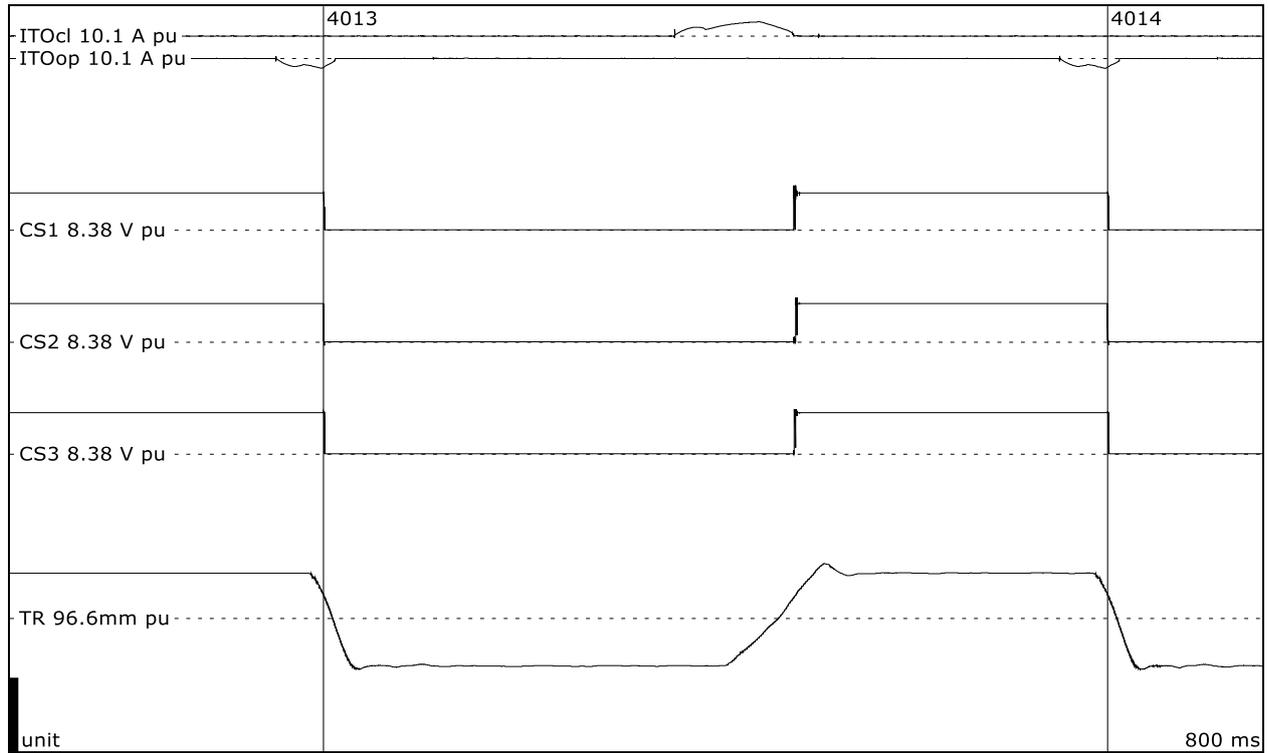

Test number: 170518-4012

Time interval between operations	s	0,302		
Operation	CO			
Phase		A	B	C
Current closing coil	A	2,27		
Closing time	ms	73,4	74,5	73,6
Current opening coil	A	-2,02		
Opening time	ms	26,3	25,9	26,4

Voltage closing coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	220 Vd.c.	Operating pressure	- MPa

Remarks: -

No-load test

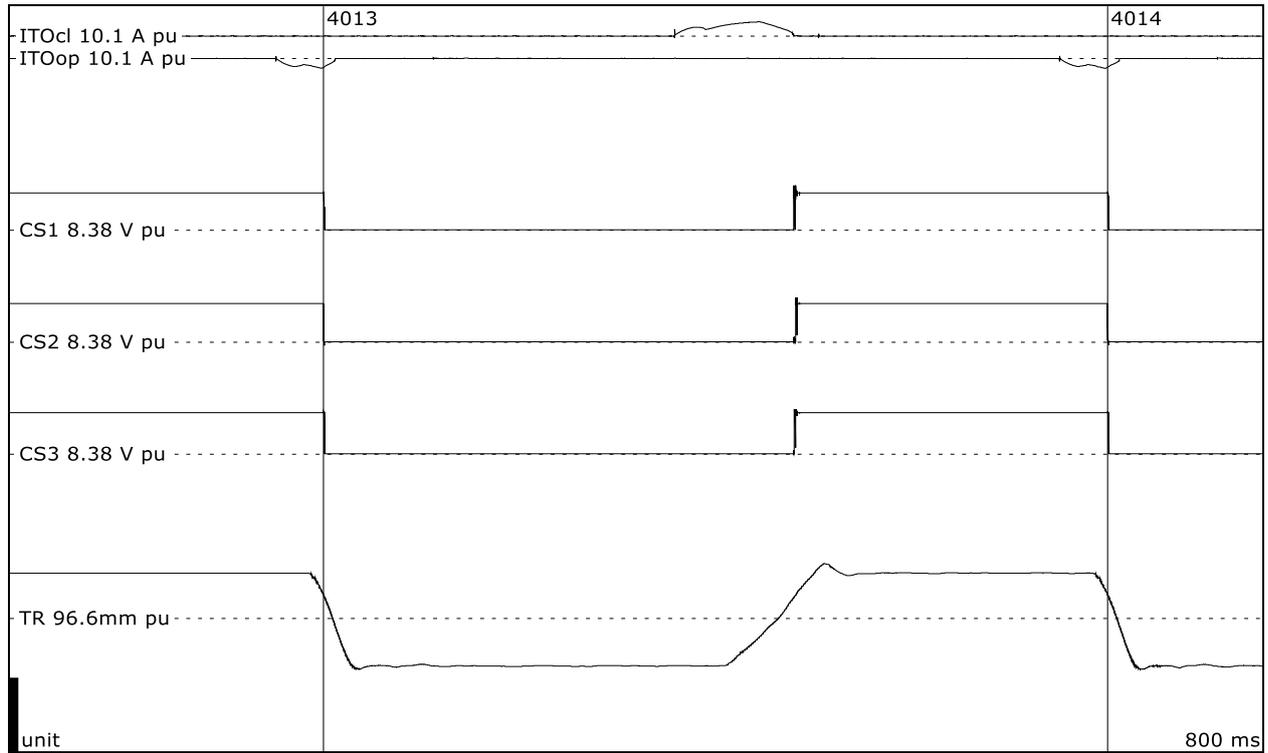

Test number: 170518-4013

Operation		O		
Phase		A	B	C
Current opening coil	A	-1,34		
Opening time	ms	30,9	30,4	31,0

Voltage opening coil	154 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

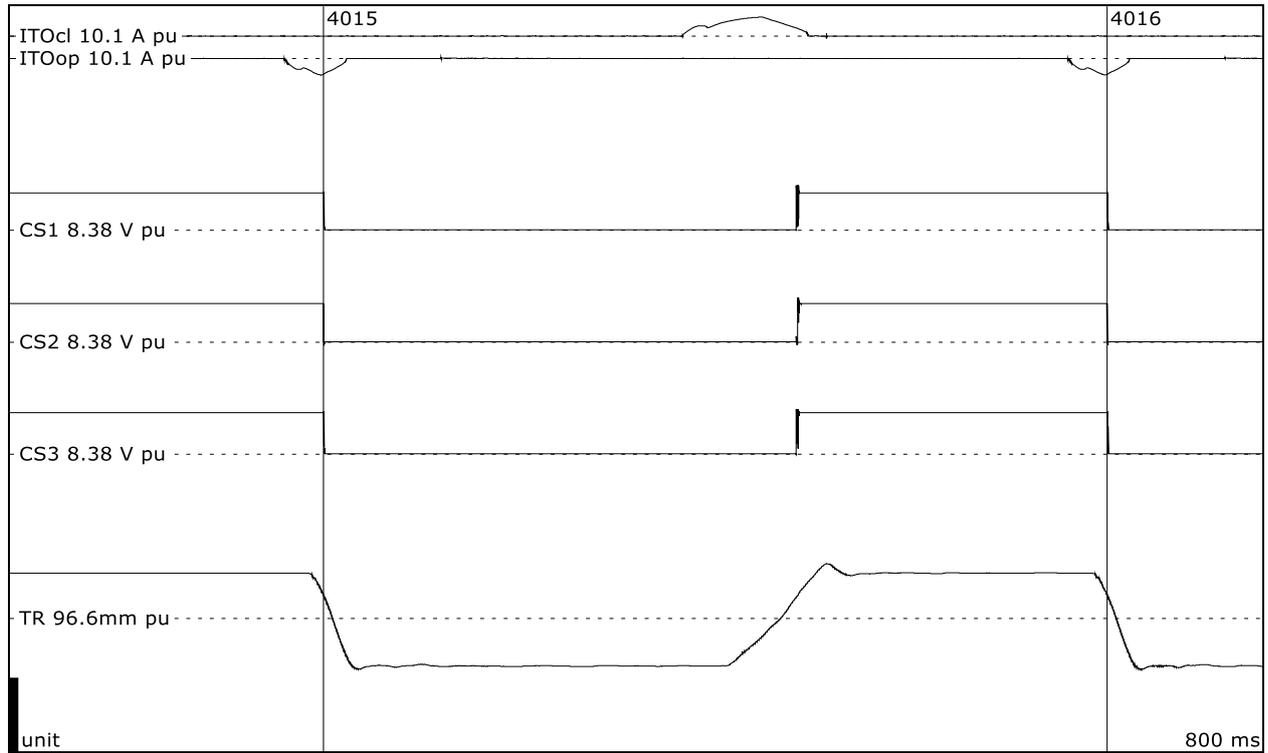

Test number: 170518-4014

Time interval between operations	s	0,300		
Operation	CO			
Phase		A	B	C
Current closing coil	A	1,89		
Closing time	ms	75,9	77,1	76,2
Current opening coil	A	-1,36		
Opening time	ms	31,2	30,7	31,2

Voltage closing coil	187 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	154 Vd.c.	Operating pressure	- MPa

Remarks: -

No-load test

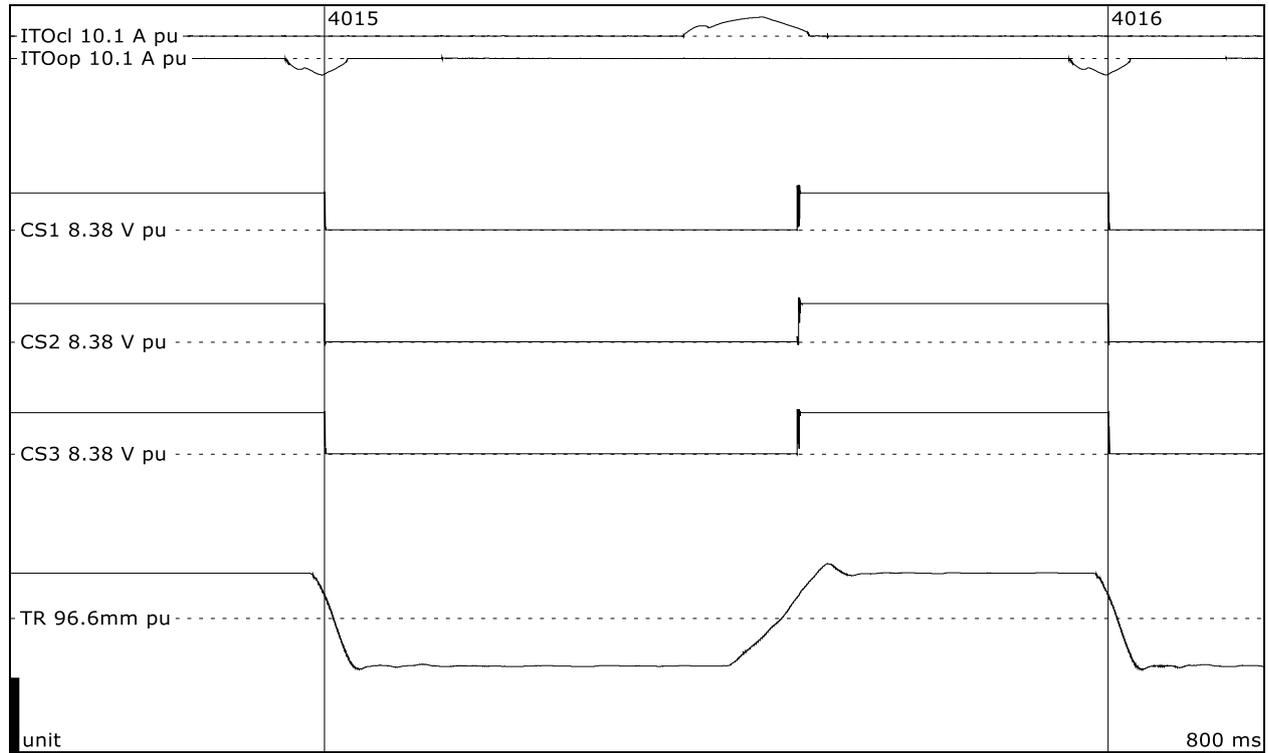

Test number: 170518-4015

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,29		
Opening time	ms	25,7	25,2	25,7

Voltage opening coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

Test number: 170518-4016

Time interval between operations	s	0,301		
Operation	CO			
Phase		A	B	C
Current closing coil	A	2,54		
Closing time	ms	72,3	73,3	72,4
Current opening coil	A	-2,27		
Opening time	ms	25,5	25,0	25,6

Voltage closing coil	242 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	242 Vd.c.	Operating pressure	- MPa

Remarks: -

Remarks: -

No-load test

Test number: 170519-4010

Operation		O		
Phase		A	B	C
Current opening coil	A	-2,06		
Opening time	ms	26,9	26,0	26,6

Voltage opening coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

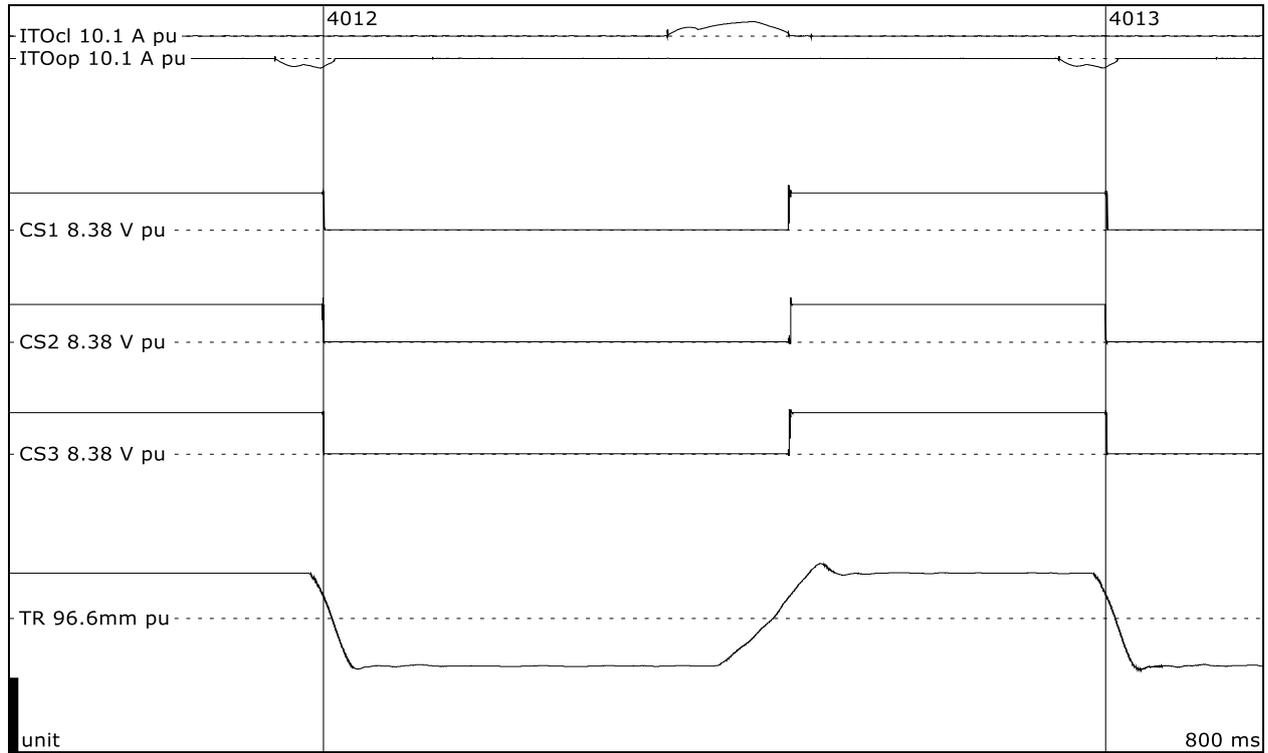

Test number: 170519-4011

Time interval between operations	s	0,299		
Operation	CO			
Phase		A	B	C
Current closing coil	A	2,31		
Closing time	ms	75,1	76,8	75,8
Current opening coil	A	-2,01		
Opening time	ms	26,4	25,3	26,0

Voltage closing coil	220 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	220 Vd.c.	Operating pressure	- MPa

Remarks: -

No-load test

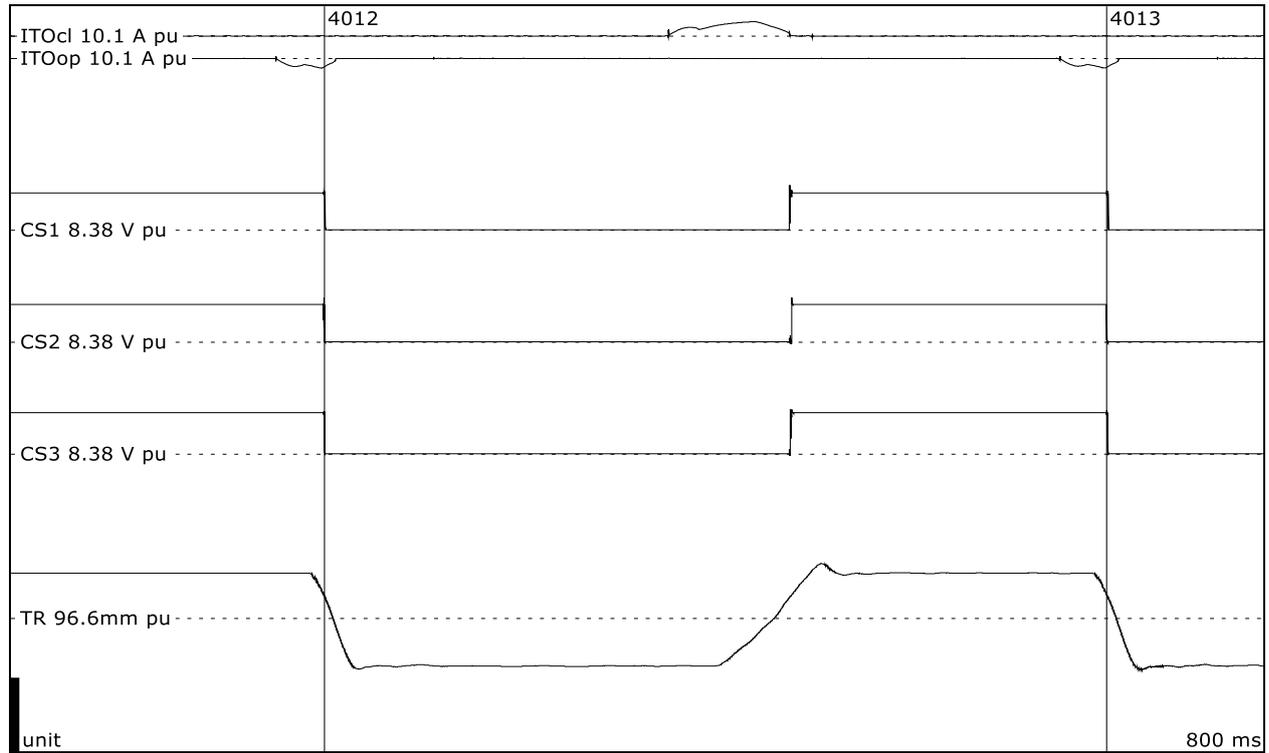

Test number: 170519-4012

Operation		O		
Phase		A	B	C
Current opening coil	A	-1,33		
Opening time	ms	31,2	30,4	30,9

Voltage opening coil	154 Vd.c.	Gas pressure at 20 °C	0,60 MPa
		Operating pressure	- MPa

Remarks: -

No-load test

Test number: 170519-4013

Time interval between operations	s	0,296		
Operation	CO			
Phase		A	B	C
Current closing coil	A	1,93		
Closing time	ms	77,0	78,7	77,7
Current opening coil	A	-1,33		
Opening time	ms	30,8	29,8	30,5

Voltage closing coil	187 Vd.c.	Gas pressure at 20 °C	0,60 MPa
Voltage opening coil	154 Vd.c.	Operating pressure	- MPa

Remarks: -

24.3 Condition / inspection after test

Externally no visible change.

Inspection of contacts:

Fixed arcing contact slightly burnt.

Moving arcing contact slightly burnt.

Fixed main contact finger tips showed locally slight commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally slight commutation marks. Silver layer on main contact area intact.

Nozzle slightly eroded.

Auxiliary nozzle slightly eroded.

24.4 Photographs after test

25 SHORT-TIME WITHSTAND CURRENT AND PEAK WITHSTAND CURRENT TEST

Standard and date

Standard IEC 62271-100
Test date 30 May 2017

25.1 Condition before test

Breaker (Serial No 17102) reconditioned.

For test purposes equipment filled with air at atmospheric pressure for insulation instead of SF₆ gas.

Supply to moving contacts.

Short-circuit on fixed contacts.

Frame earthed via a CT.

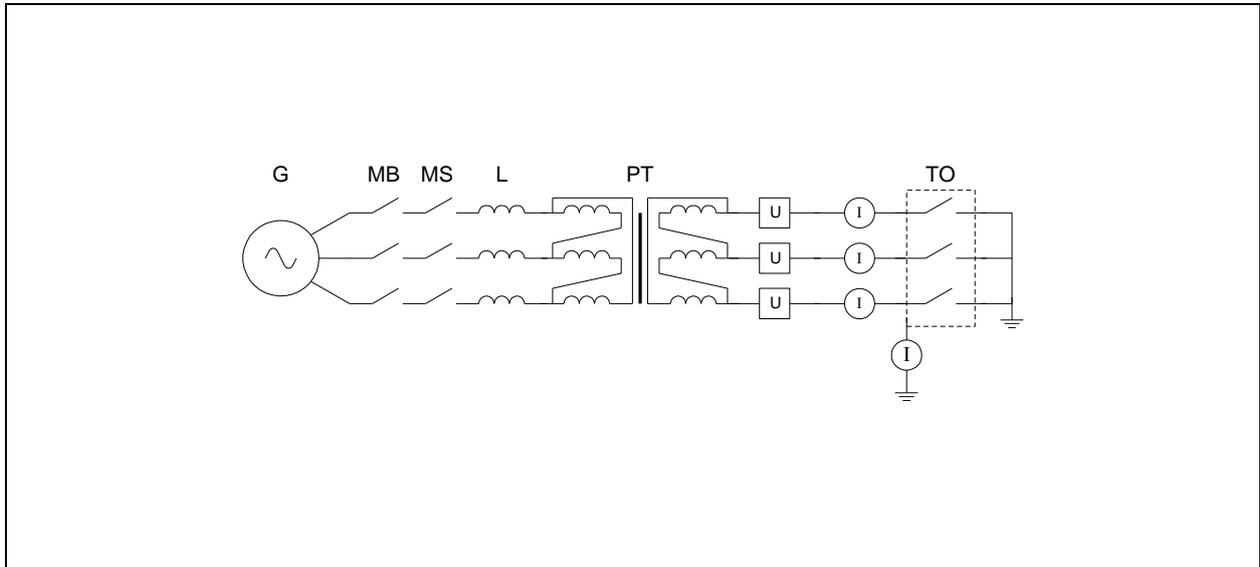

Measurement of resistance:

Pole A: 26,2 $\mu\Omega$

Pole B: 26,3 $\mu\Omega$

Pole C: 29,5 $\mu\Omega$

25.2 Test circuit S21

G = Generator TO = Test Object U = Voltage Measurement to earth
 MB = Master Breaker L = Reactor I = Current Measurement
 MS = Make Switch
 PT = Power Transformer

Supply		
Power	MVA	242
Frequency	Hz	50
Phase(s)		3
Voltage	kV	3,5
Current	kA	40
Impedance	mΩ	51,0
Power factor		< 0,1
Neutral		not earthed

Load	
Short-circuit point	earthed

Remarks: -

25.3 Photograph before test

25.4 Test results and oscillograms

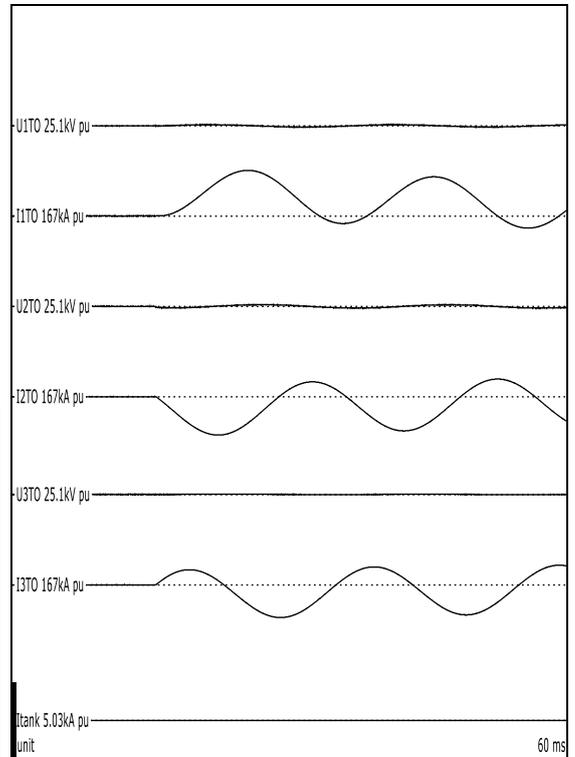

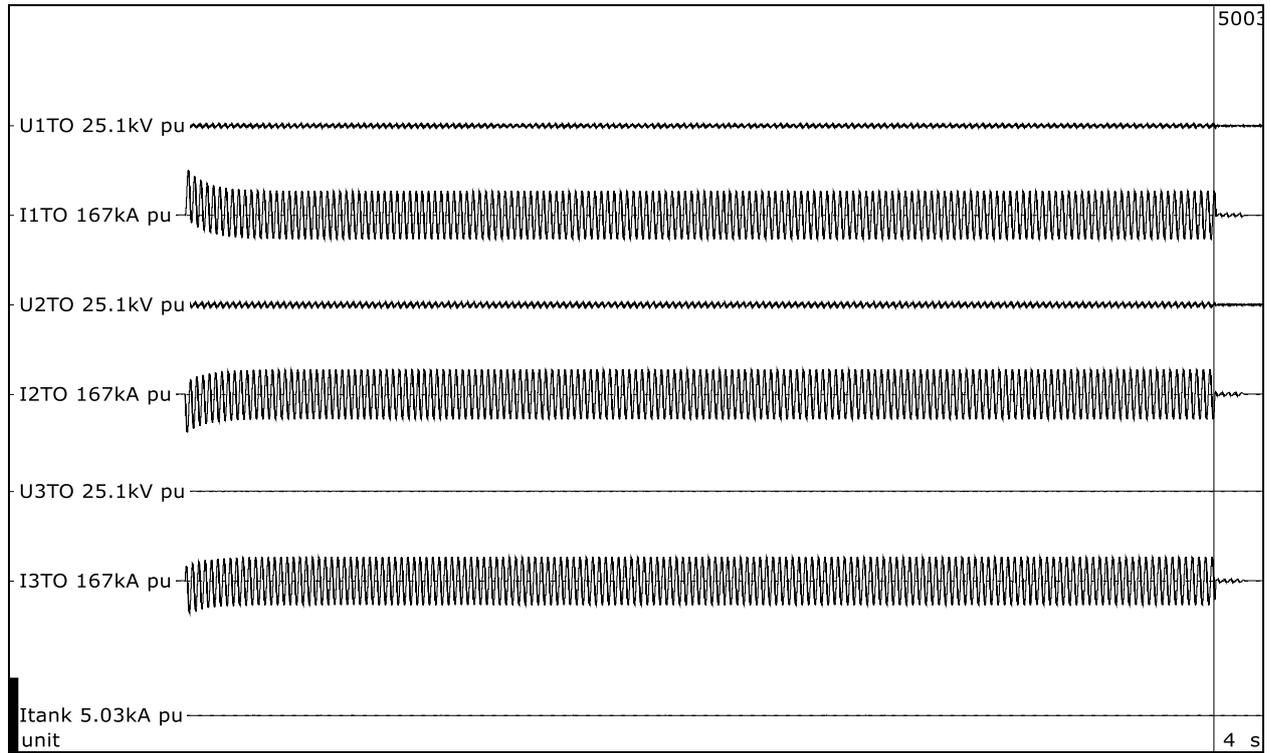

Overview of test numbers

170530-5003

Remarks

-

Short-time withstand current and peak withstand current test

Test number: 170530-5003

Phase		A	B	C
Peak value of current	kA	101	-85,5	-72,8
Symmetrical current, beginning	kA	38,4	39,4	38,1
Symmetrical current, middle	kA	38,2	39,4	38,1
Symmetrical current, end	kA	38,3	39,6	38,3
Symmetrical current, average	kA	38,3	39,5	38,2
Average current, three phase	kA	38,7		
Current duration	s	3,28	3,28	3,28
Thermal equivalent		40 kA during 3,06 s		

Gas pressure at 20 °C - MPa

Remarks: No visible disturbance.

25.5 Condition / inspection after test

Breaker could be tripped freely. See no-load test 170530-5003.

26 NO-LOAD TEST

Standard and date

Standard	IEC 62271-100
Test date	30 May 2017

26.1 Condition before test

Breaker (Serial No 17102) in same condition.

26.2 Test results and oscillograms

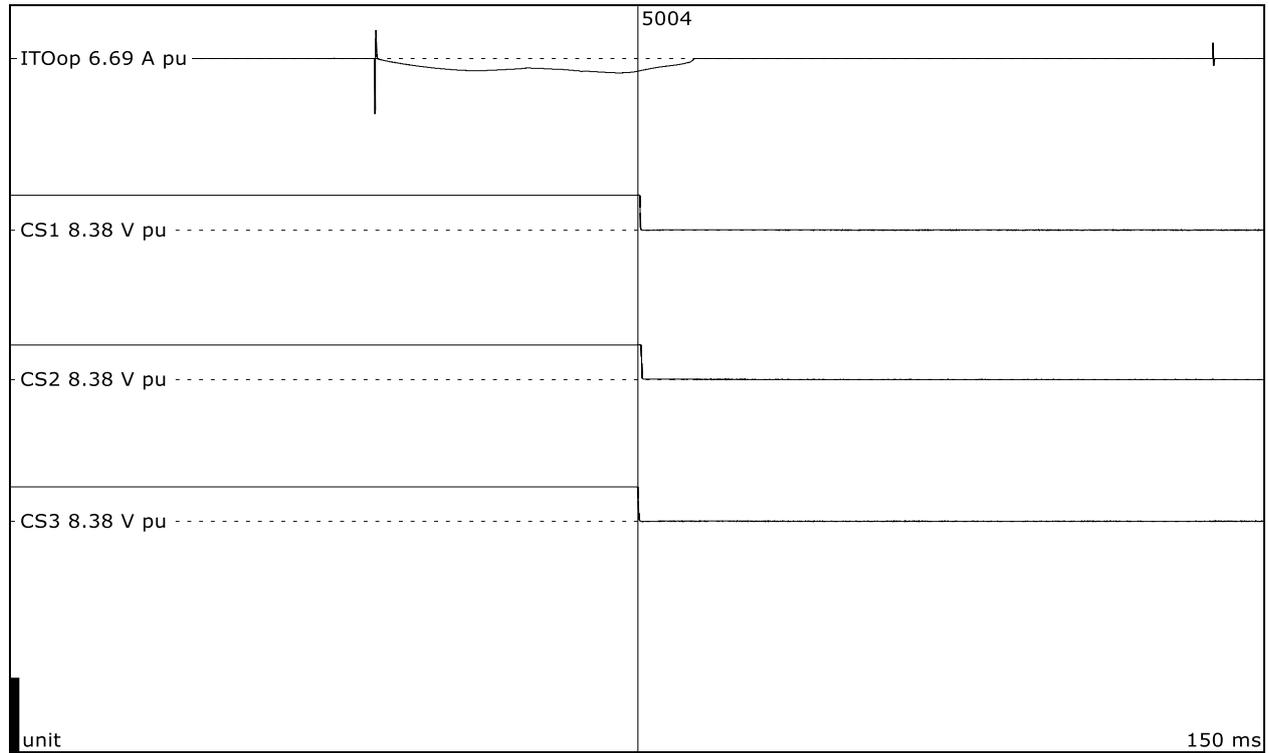

Overview of test numbers

170530-5004

Remarks

-

No-load test

Test number: 170530-5004

Operation		O		
Phase		A	B	C
Current opening coil	A	-1,31		
Opening time	ms	31,7	31,8	31,5

Voltage opening coil	- Vd.c.	Gas pressure at 20 °C	- MPa
		Operating pressure	- MPa

Remarks: -

26.3 Condition / inspection after test

Externally no visible change.

Measurement of resistance:

Pole A: 26,6 $\mu\Omega$

Pole B: 27,4 $\mu\Omega$

Pole C: 29,9 $\mu\Omega$

Inspection of contacts:

Fixed arcing contact practically new.

Moving arcing contact practically new.

Fixed main contact area practically new. Silver layer intact.

Moving main contact area practically new. Silver layer intact.

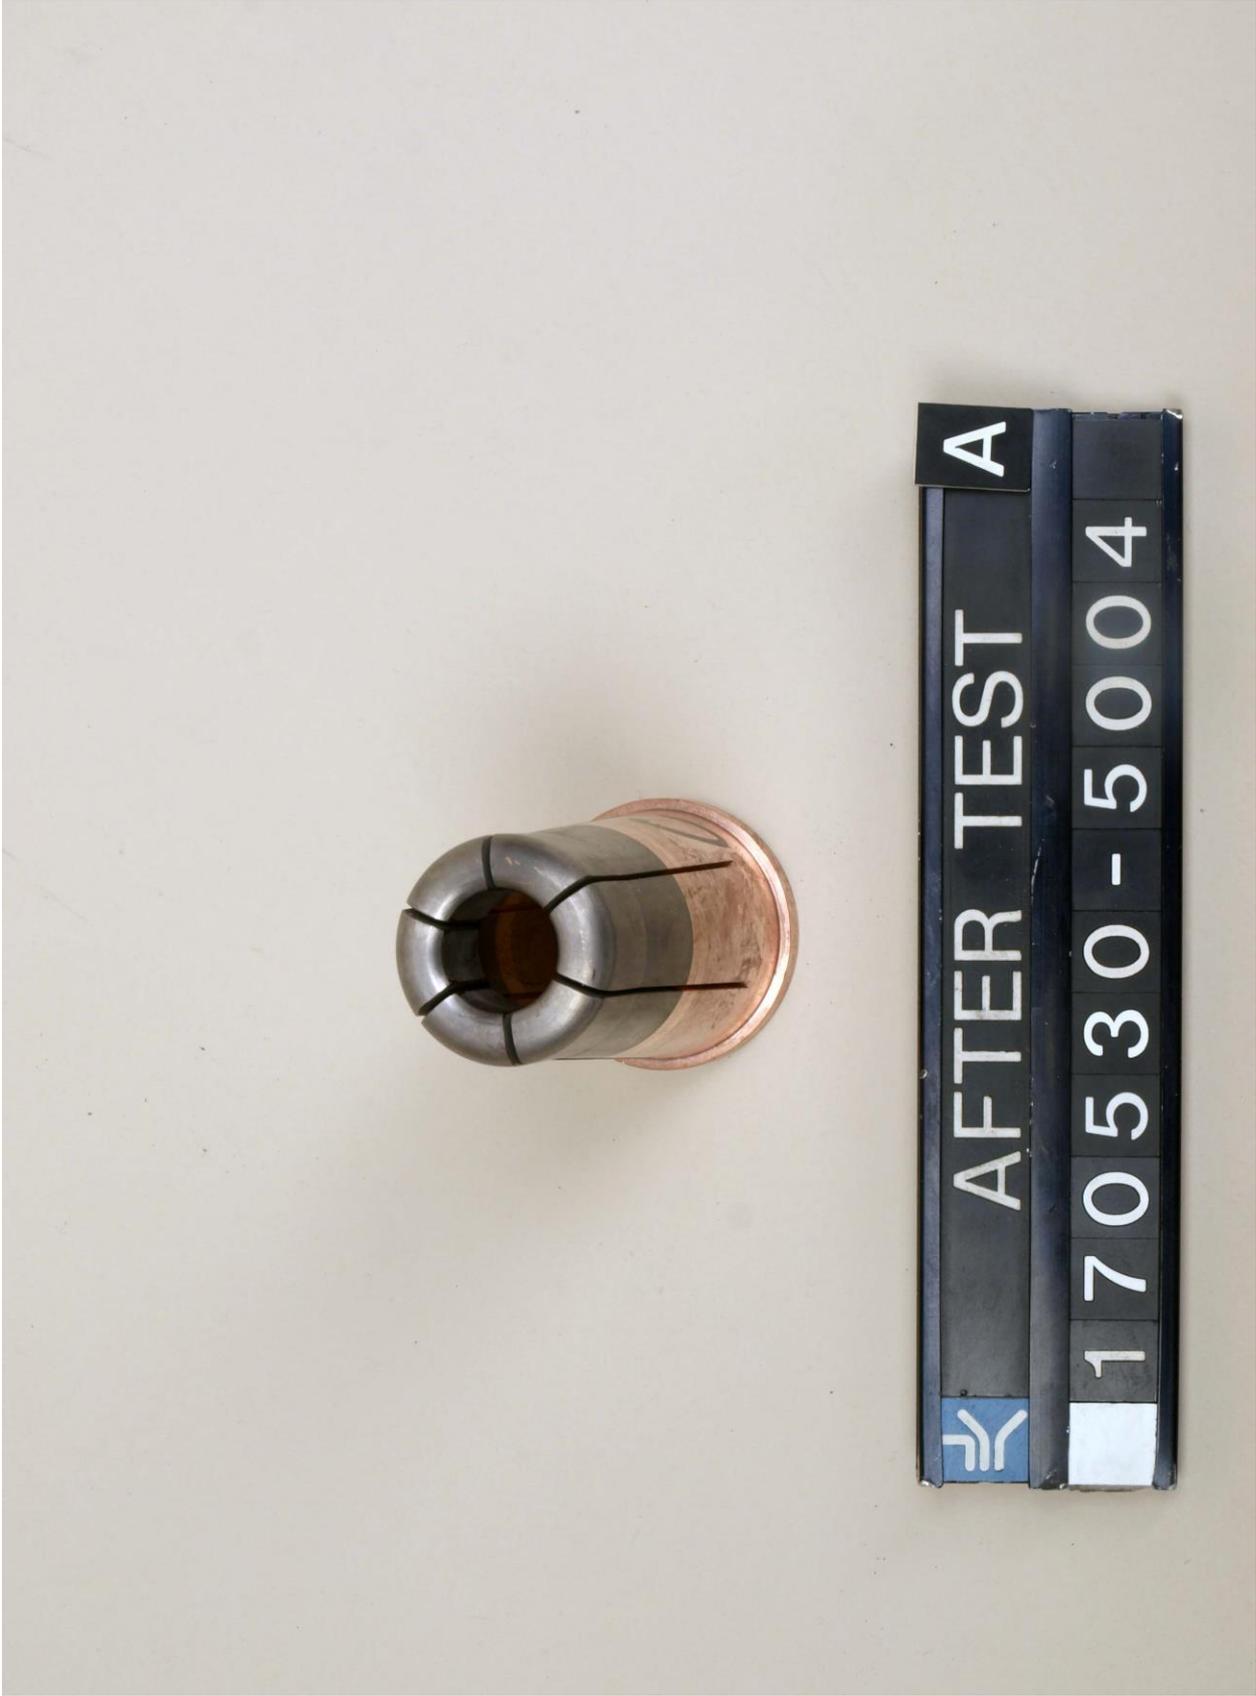

Nozzle practically new

Auxiliary nozzle practically new.

Description of the three-phase synthetic circuit for synthetic make

The circuit is composed of:

a) **A three-phase current circuit**b) **Two single-phase voltage circuits**

This voltage is used to ascertain that the duration of pre-arcing of the making device is correct, to set the pre-arcing time as determined by direct pre-arcing tests at full applied voltage.

The first and the second pre-arcing phases are connected to a dc voltage source with a steep rate of rise, in the test circuit phases T and S. The voltage distribution between these phases is made by capacitance C_{hd}. Connecting the two phases to the same voltage source, correct interaction is achieved between the first and second pre-arcing phase as in a three-phase system.

The third pre-arcing phase is connected to an independent third voltage with a steep rate of rise, in the test circuit phase R.

The evolving fault current is regulated by the dependent triggered gap GP.

The delay between the commencement of the pre-arcing and the evolving fault current is the transfer time.

30.1 Condition before test

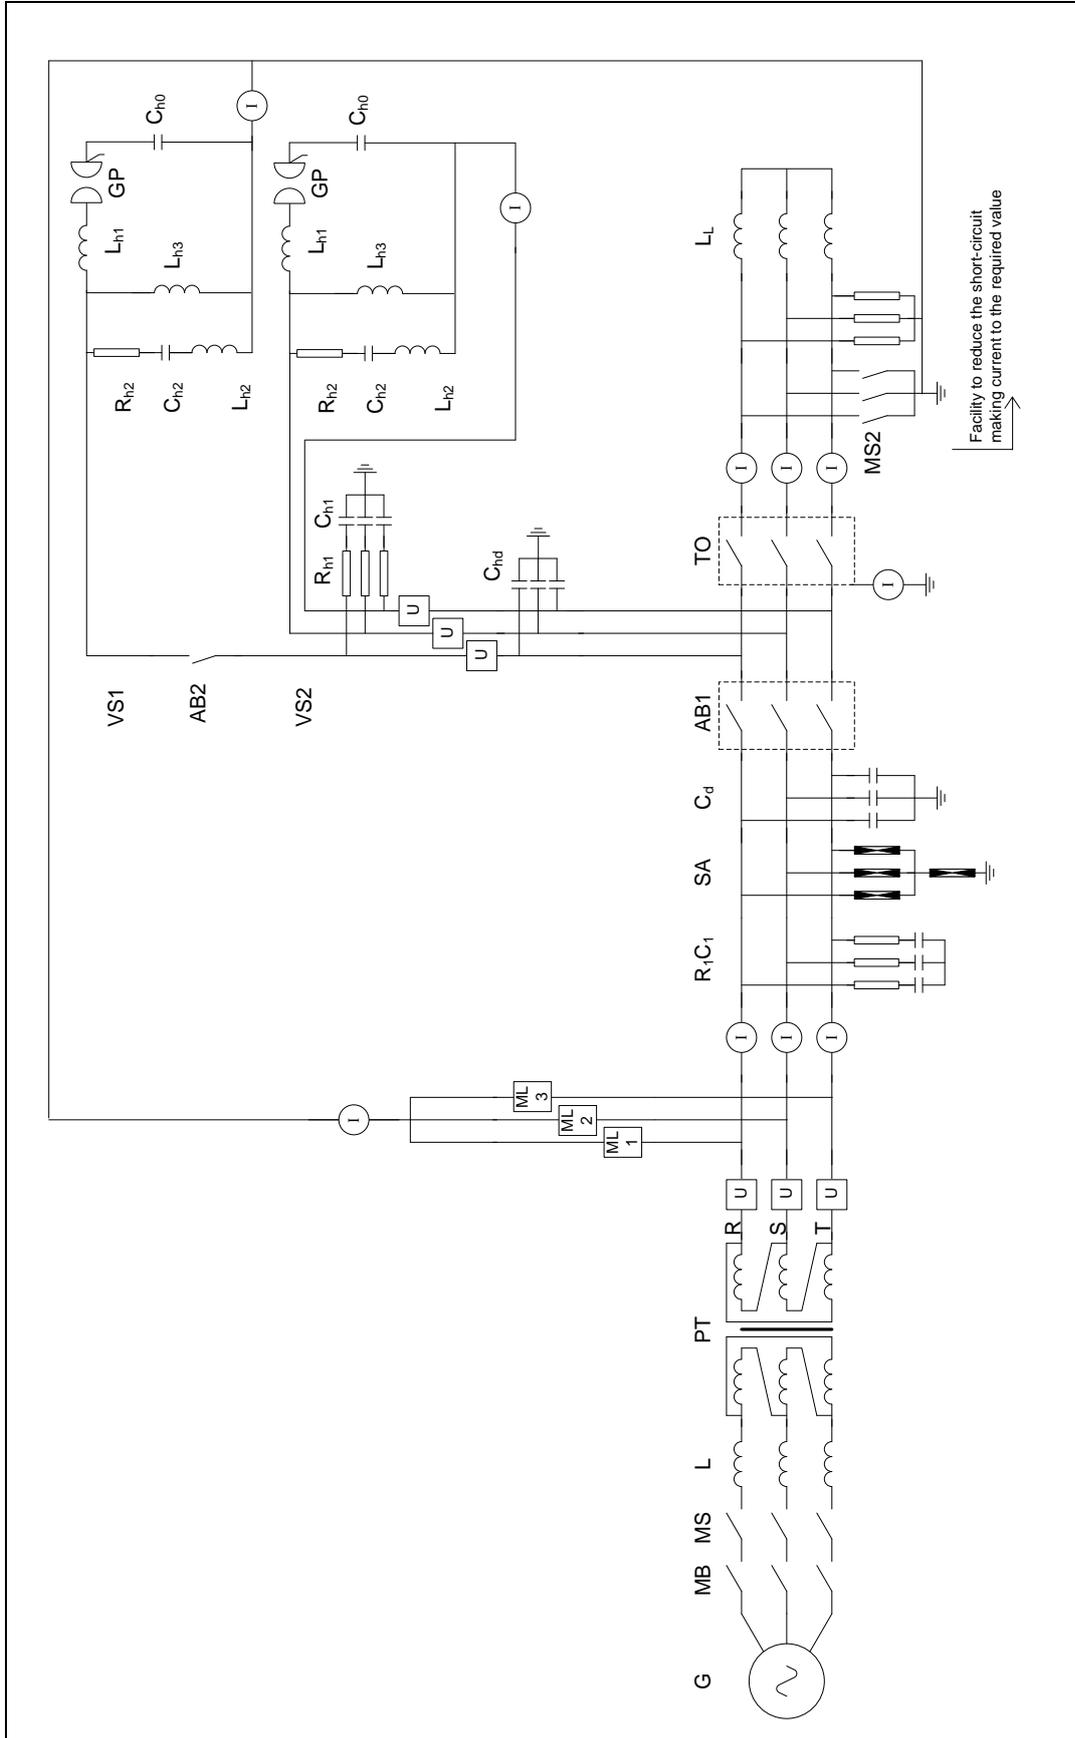

Breaker (Serial No 17101) in same condition.
Supply to fixed contacts.
Short-circuit on moving contacts.
Frame earthed via a CT.

Auxiliary breaker:

An SF₆ breaker, provided by KEMA Laboratories.
Number of elements: 1 per breaker.

30.2 Test circuit S30

t ₂	μs	266	280	280
RRRV	kV/ μs	2,00	1,40	1,40

The circuit is composed of:

a) **A three-phase current source**

The neutral point of the supply circuit is isolated and the short-circuit-point is earthed.

b) **Two parallel current injection circuits**

One of the two circuits is used for the test of the first-pole-to-clear conditions. This circuit, one side of which is earthed and based on a fptc-factor of 1,5, is applied to the terminals of the first clearing pole, phase R.

The second circuit is used to obtain the conditions of the second and third clearing poles. This circuit, which is floating in relation to earth, is applied across these two poles, phase S and phase T. The voltage is divided at 50% / 50% between the two poles by means of capacitors

The recovery voltage for both circuits is transformed in a decaying power-frequency voltage by the use of air-cored reactors.

c) **Multi-loop reignition circuits**

For all poles standard RC-reignition circuits have been used.

The phases R, S and T relate to the diagram, presented on the previous page.

31.3 Condition / inspection after test

Externally no visible change.

Inspection of contacts:

Fixed arcing contact moderately burnt.

Moving arcing contact moderately burnt.

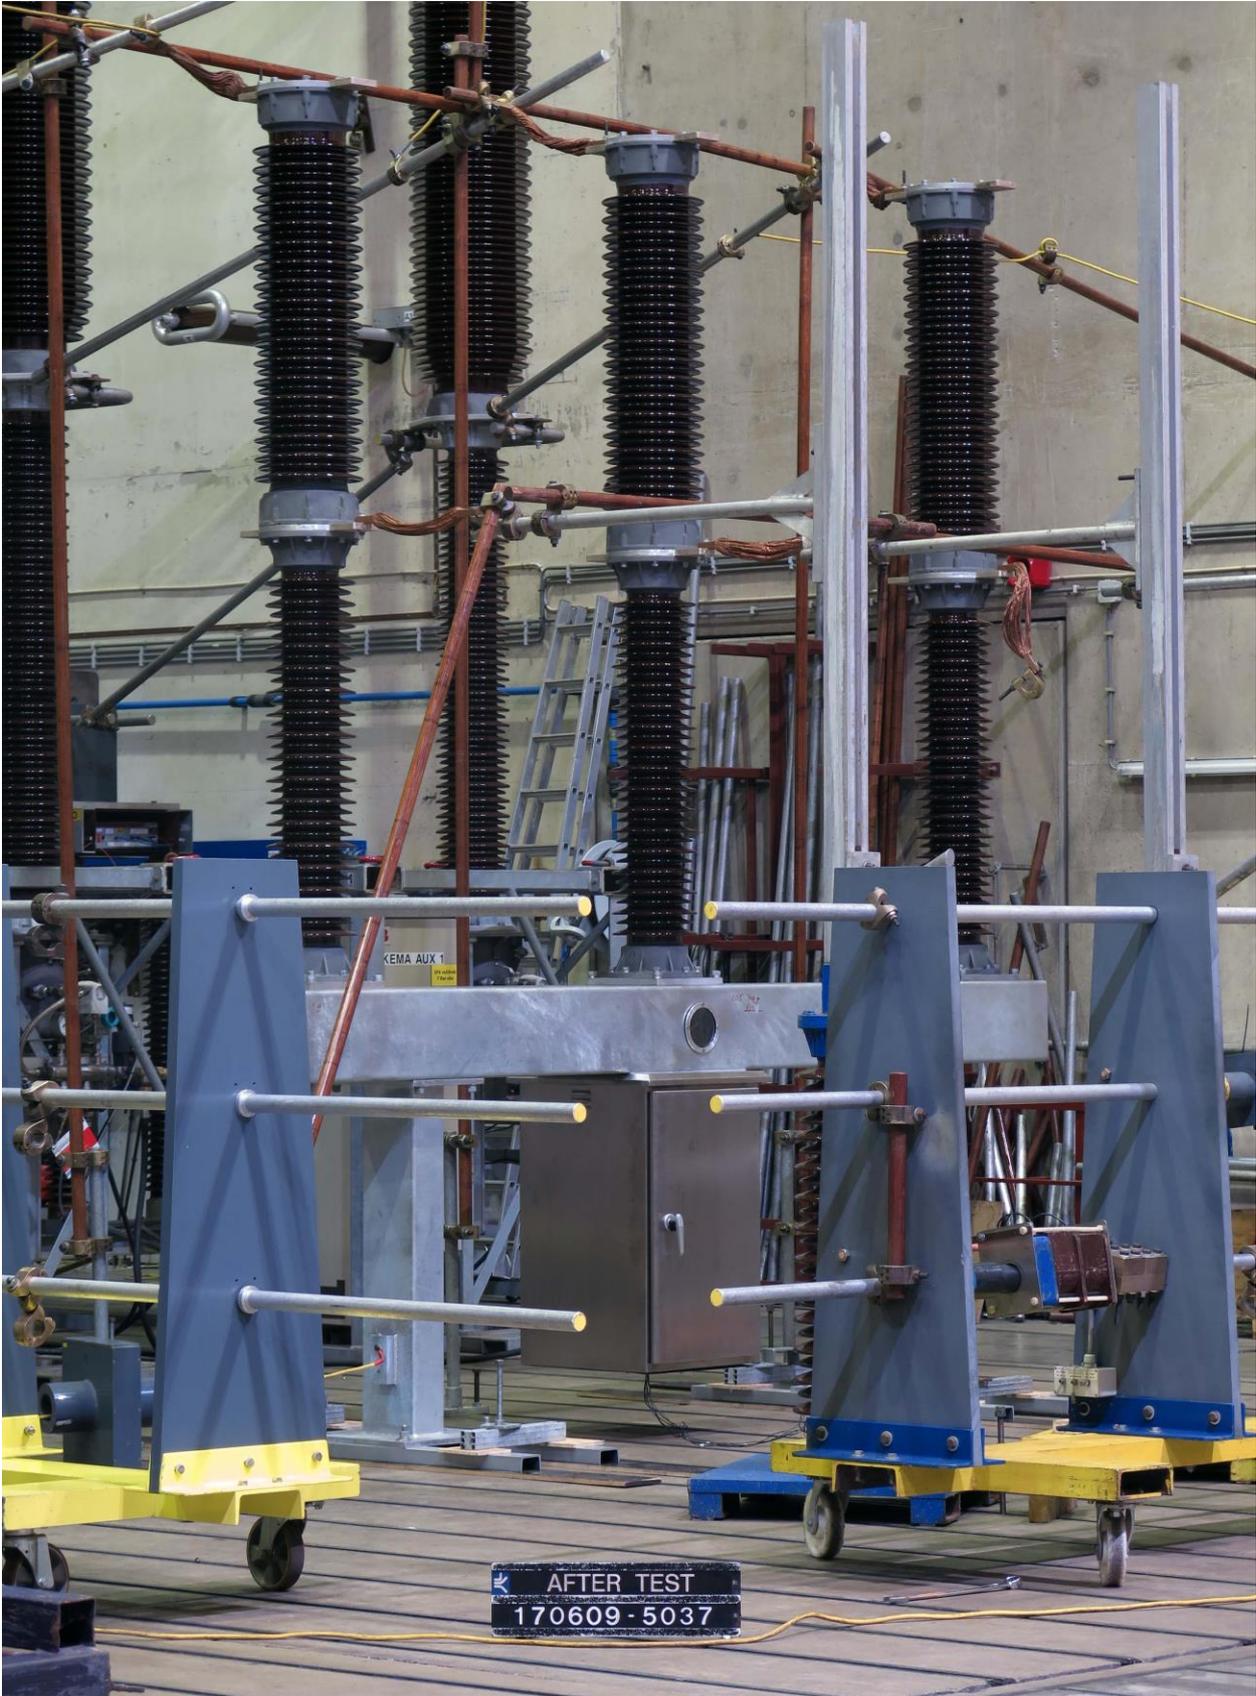

Fixed main contact finger tips showed locally moderate commutation marks. Silver layer on main contact area intact.

Moving main contact rim showed locally moderate commutation marks. Silver layer on main contact area intact.

Nozzle moderately eroded.

Auxiliary nozzle moderately eroded.
